OzGrav

One year of operation!

Gardner, Sun, et al. 2023

Rubin:

~10 million alerts per night
lots of source confusion!

(WST = Rubin on steroids!)

Rubin:

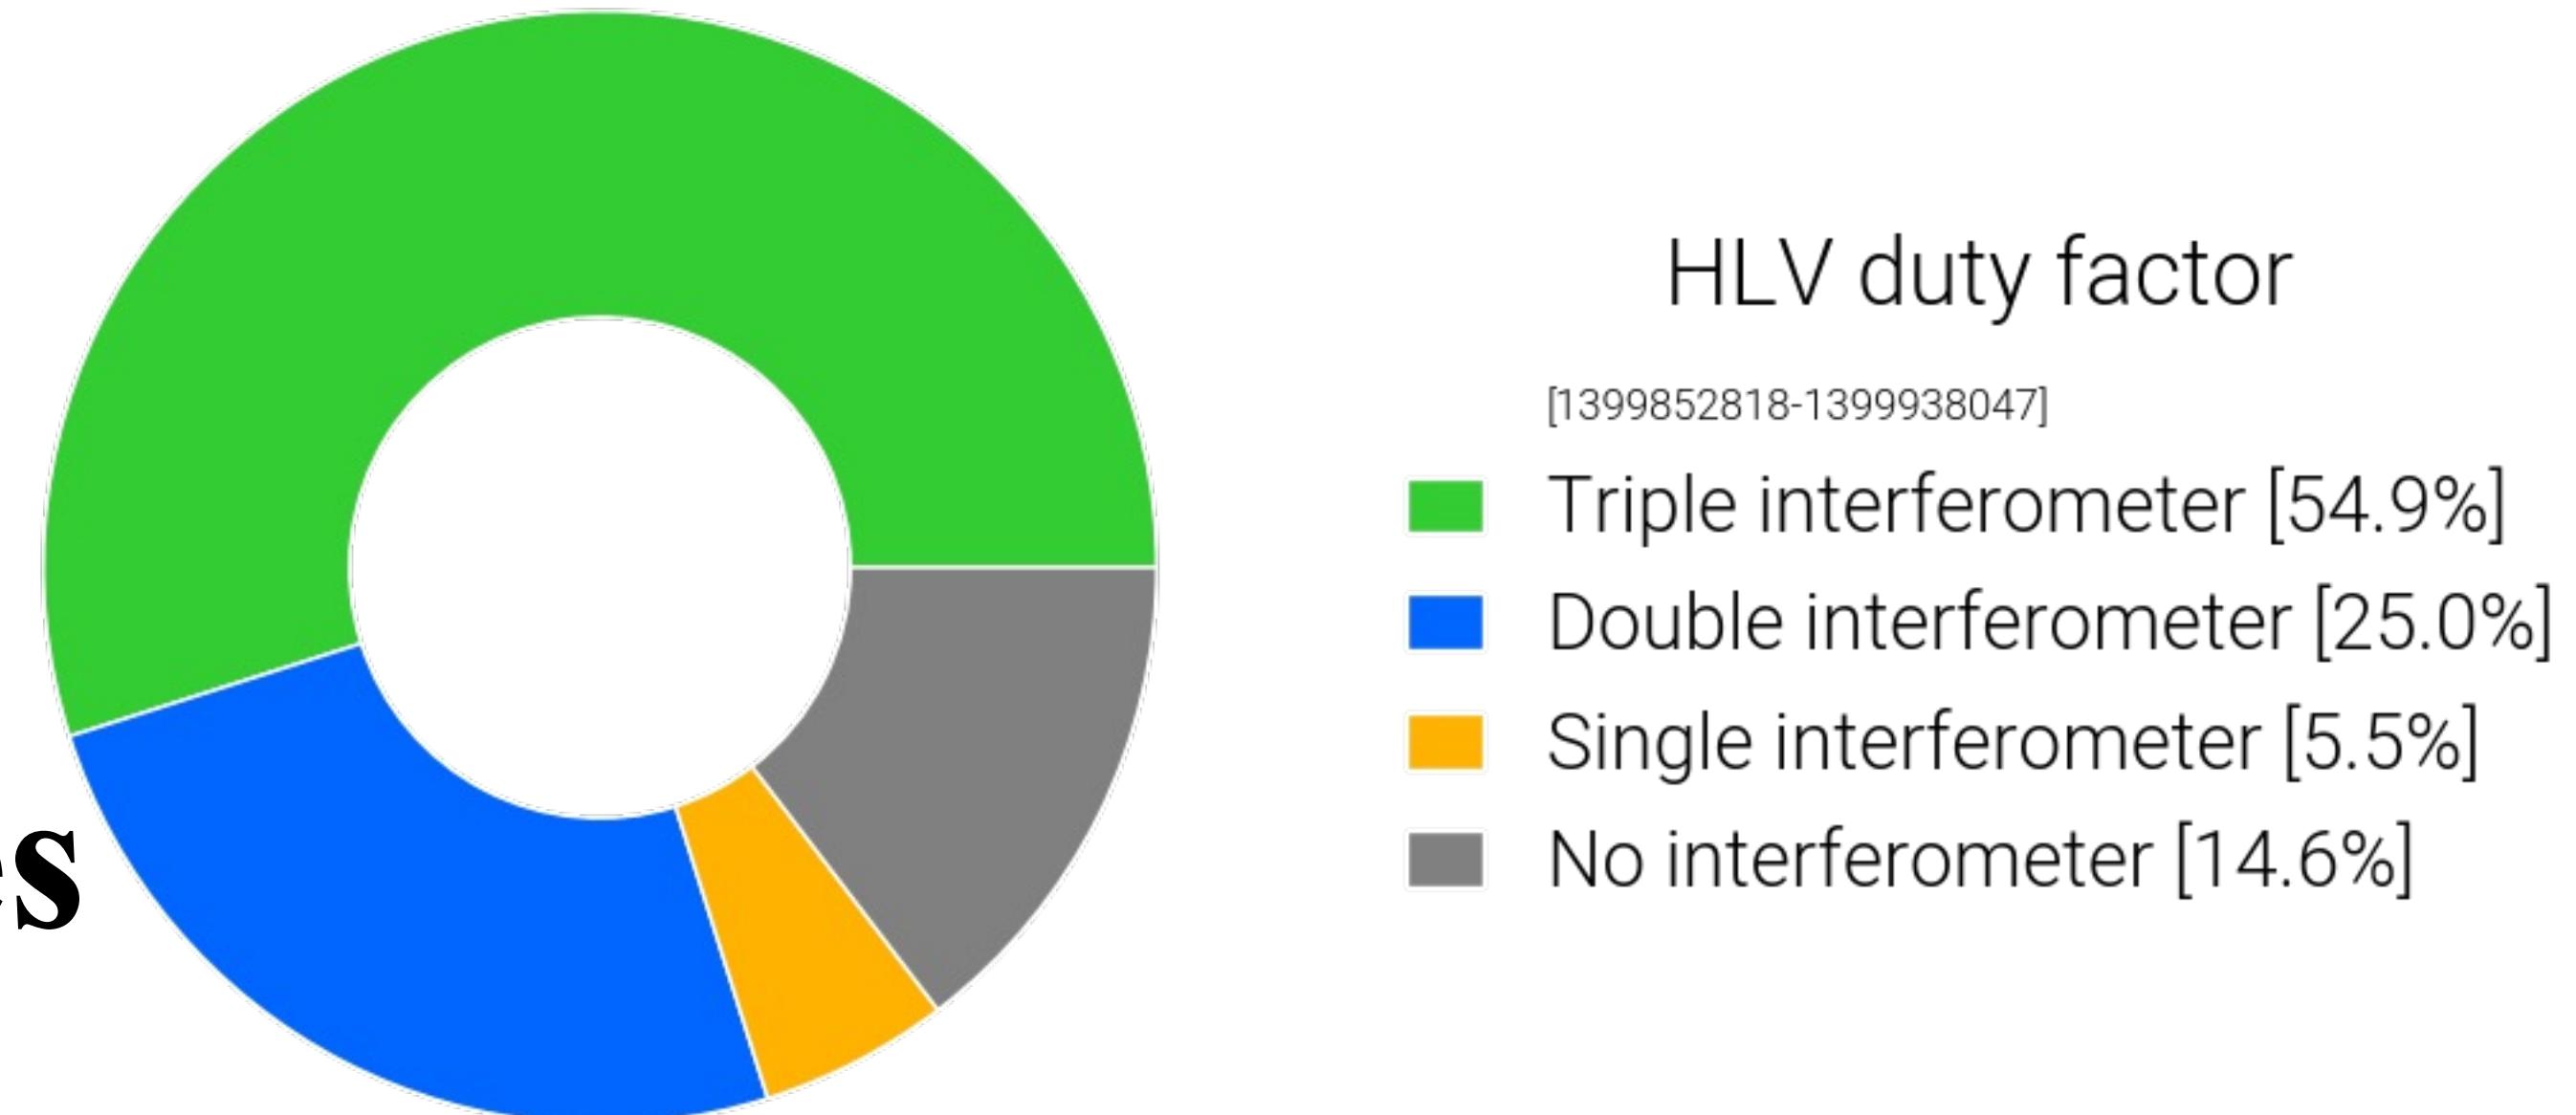

~10 million alerts per night
lots of source confusion!

(WST = Rubin on steroids!)

- **Source localisation:**
 - Multimessenger astrophysics with neutron star binaries
 - Gamma-ray burst astrophysics, kilonovae, jet launching, black-hole formation, ...
 - Gravitational-wave cosmology/cosmography
 - Burst (SNe, magnetars, ...) source localisation

- **Source localisation:**
 - Multimessenger astrophysics with neutron star binaries
 - Gamma-ray burst astrophysics, kilonovae, jet launching, black-hole formation, ...
 - Gravitational-wave cosmology/cosmography
 - Burst (SNe, magnetars, ...) source localisation
- **Polarisation tests of GR**
- **Sensitivity**
- **Duty cycle**
- **Risk mitigation**
- **R&D capabilities**

In Sarin & PL (2021)

Science Case

- Binary neutron star mergers
- Supernovae (Jade's talk)
- Continuous Waves (Karl's talk)
- Burst sources (Jade's talk)
- Exotica

Where? Preliminary site-selection study

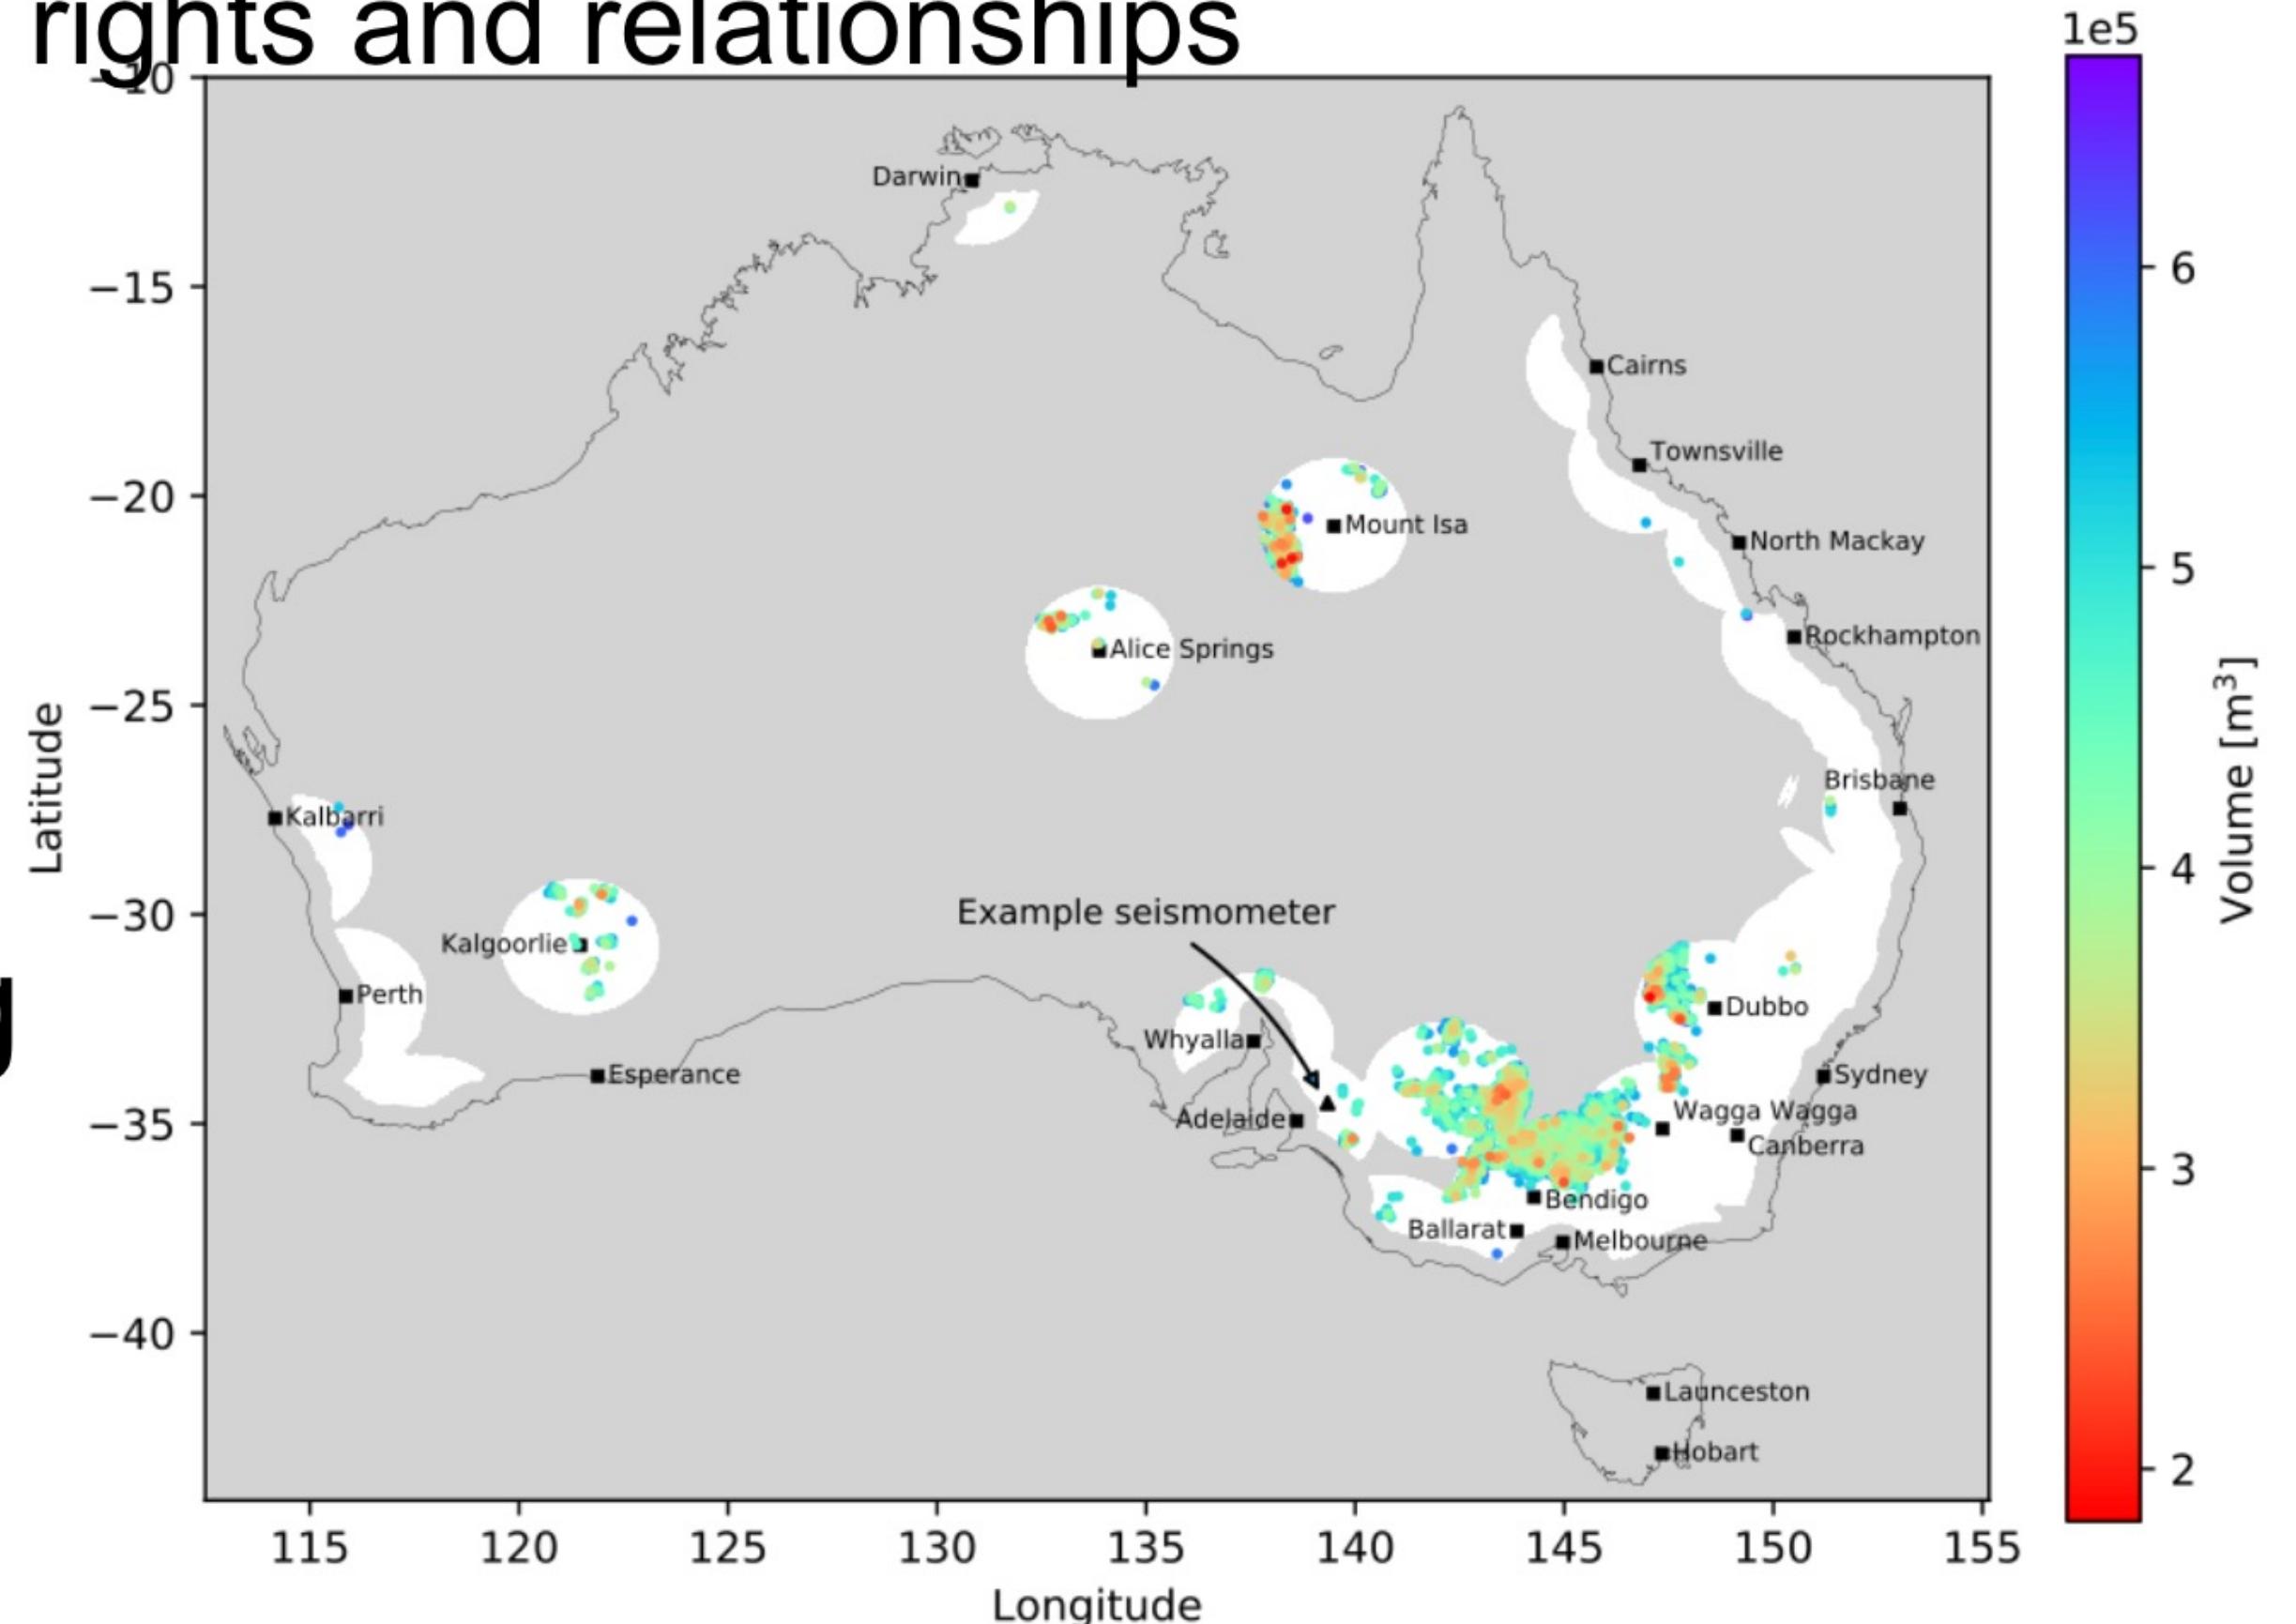

Bram Slagmolen & Daniel Toyra

Need to be delicate around indigenous land rights and relationships

- 20 km sites
- < 200 km from town of > 20k
- < 140 km from airport
- > 50 km from ocean
- < 1 M cubic meter Earth moving

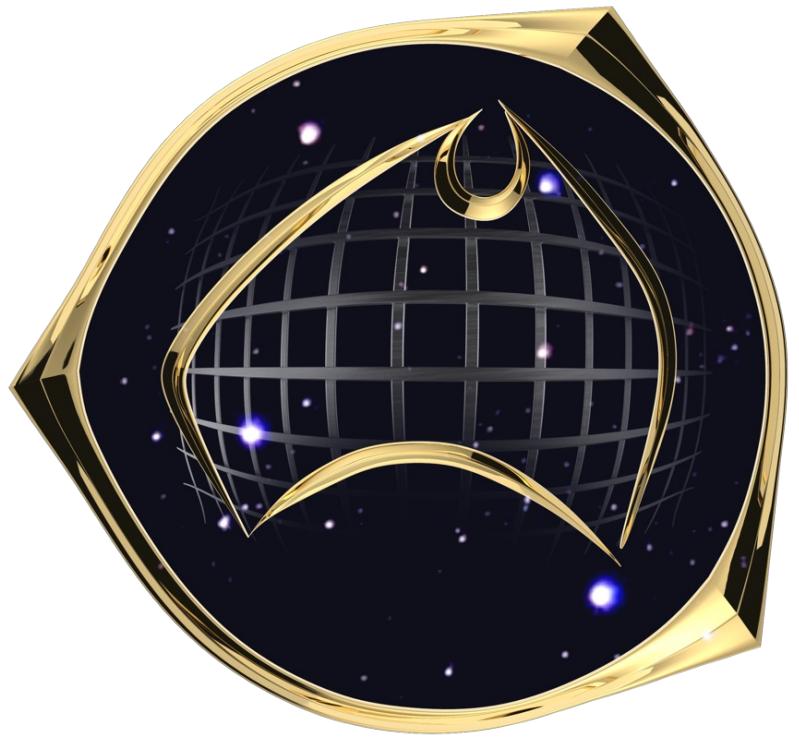

> 3M sites! (2096 shown)

Remove sites within
5km of better site → 1062

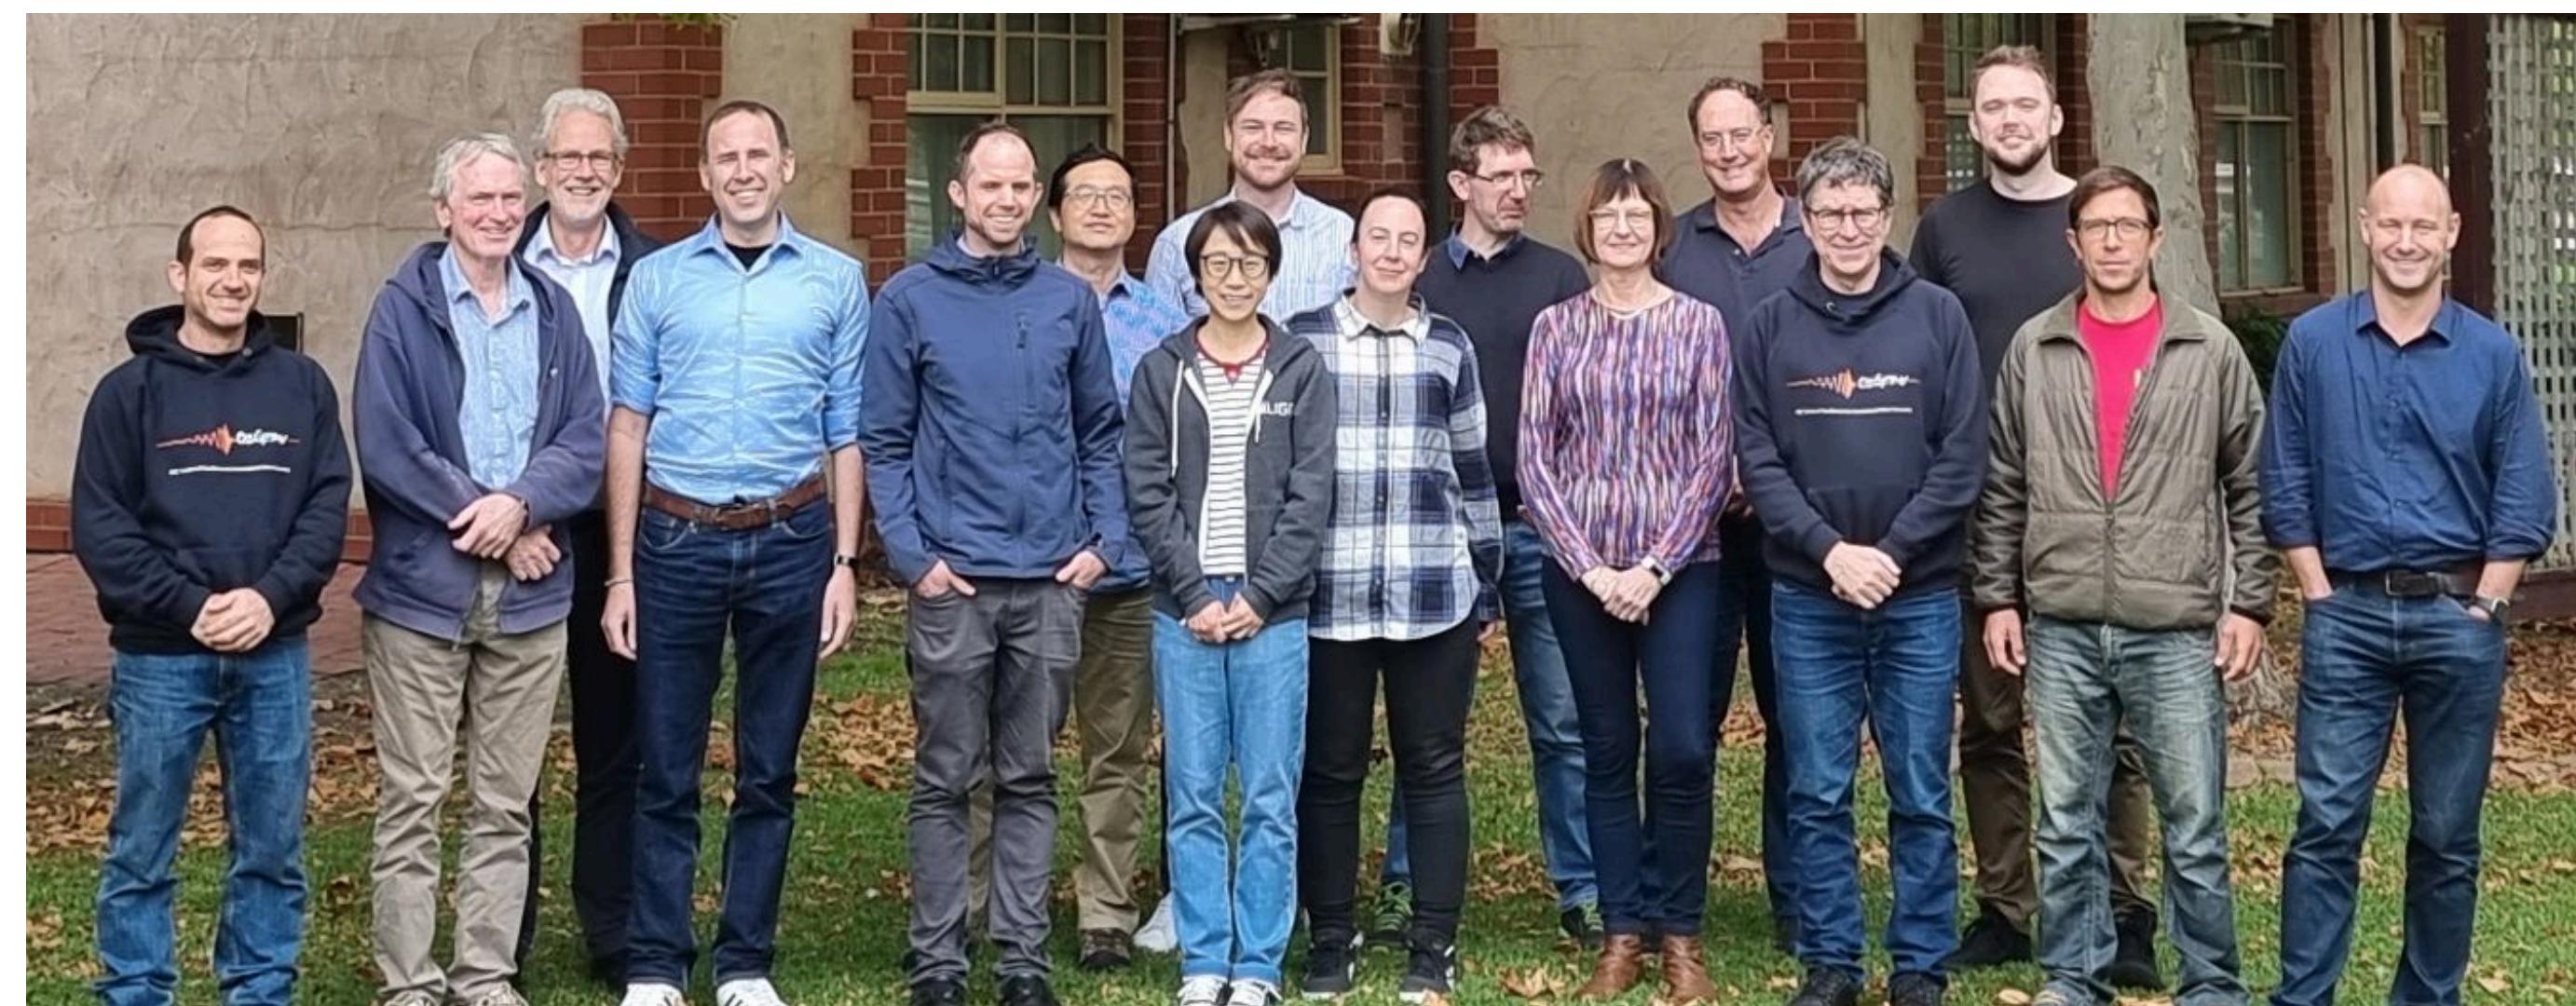

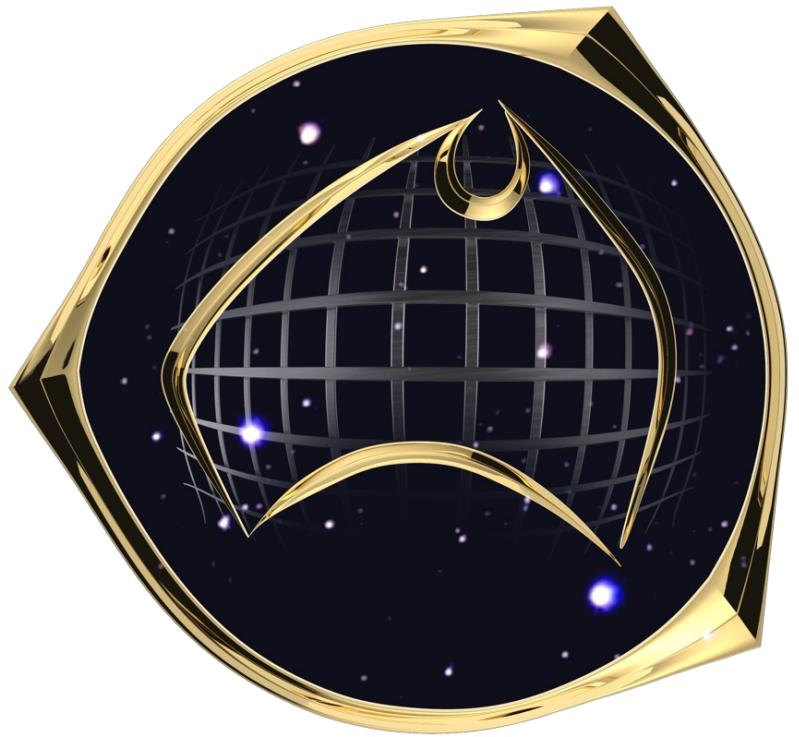

Australian Gravitational Wave Observatory Project

- Develop a Project Office with executive structure and oversight to manage and develop an Australian Gravitational-Wave Observatory project.
- Establish community that speaks with one voice to stakeholders including government, industry, fellow scientists, and international partners.

Paul Lasky (Chair), Yeshe Fenner, Ju Li,
David McClelland, David Ottaway

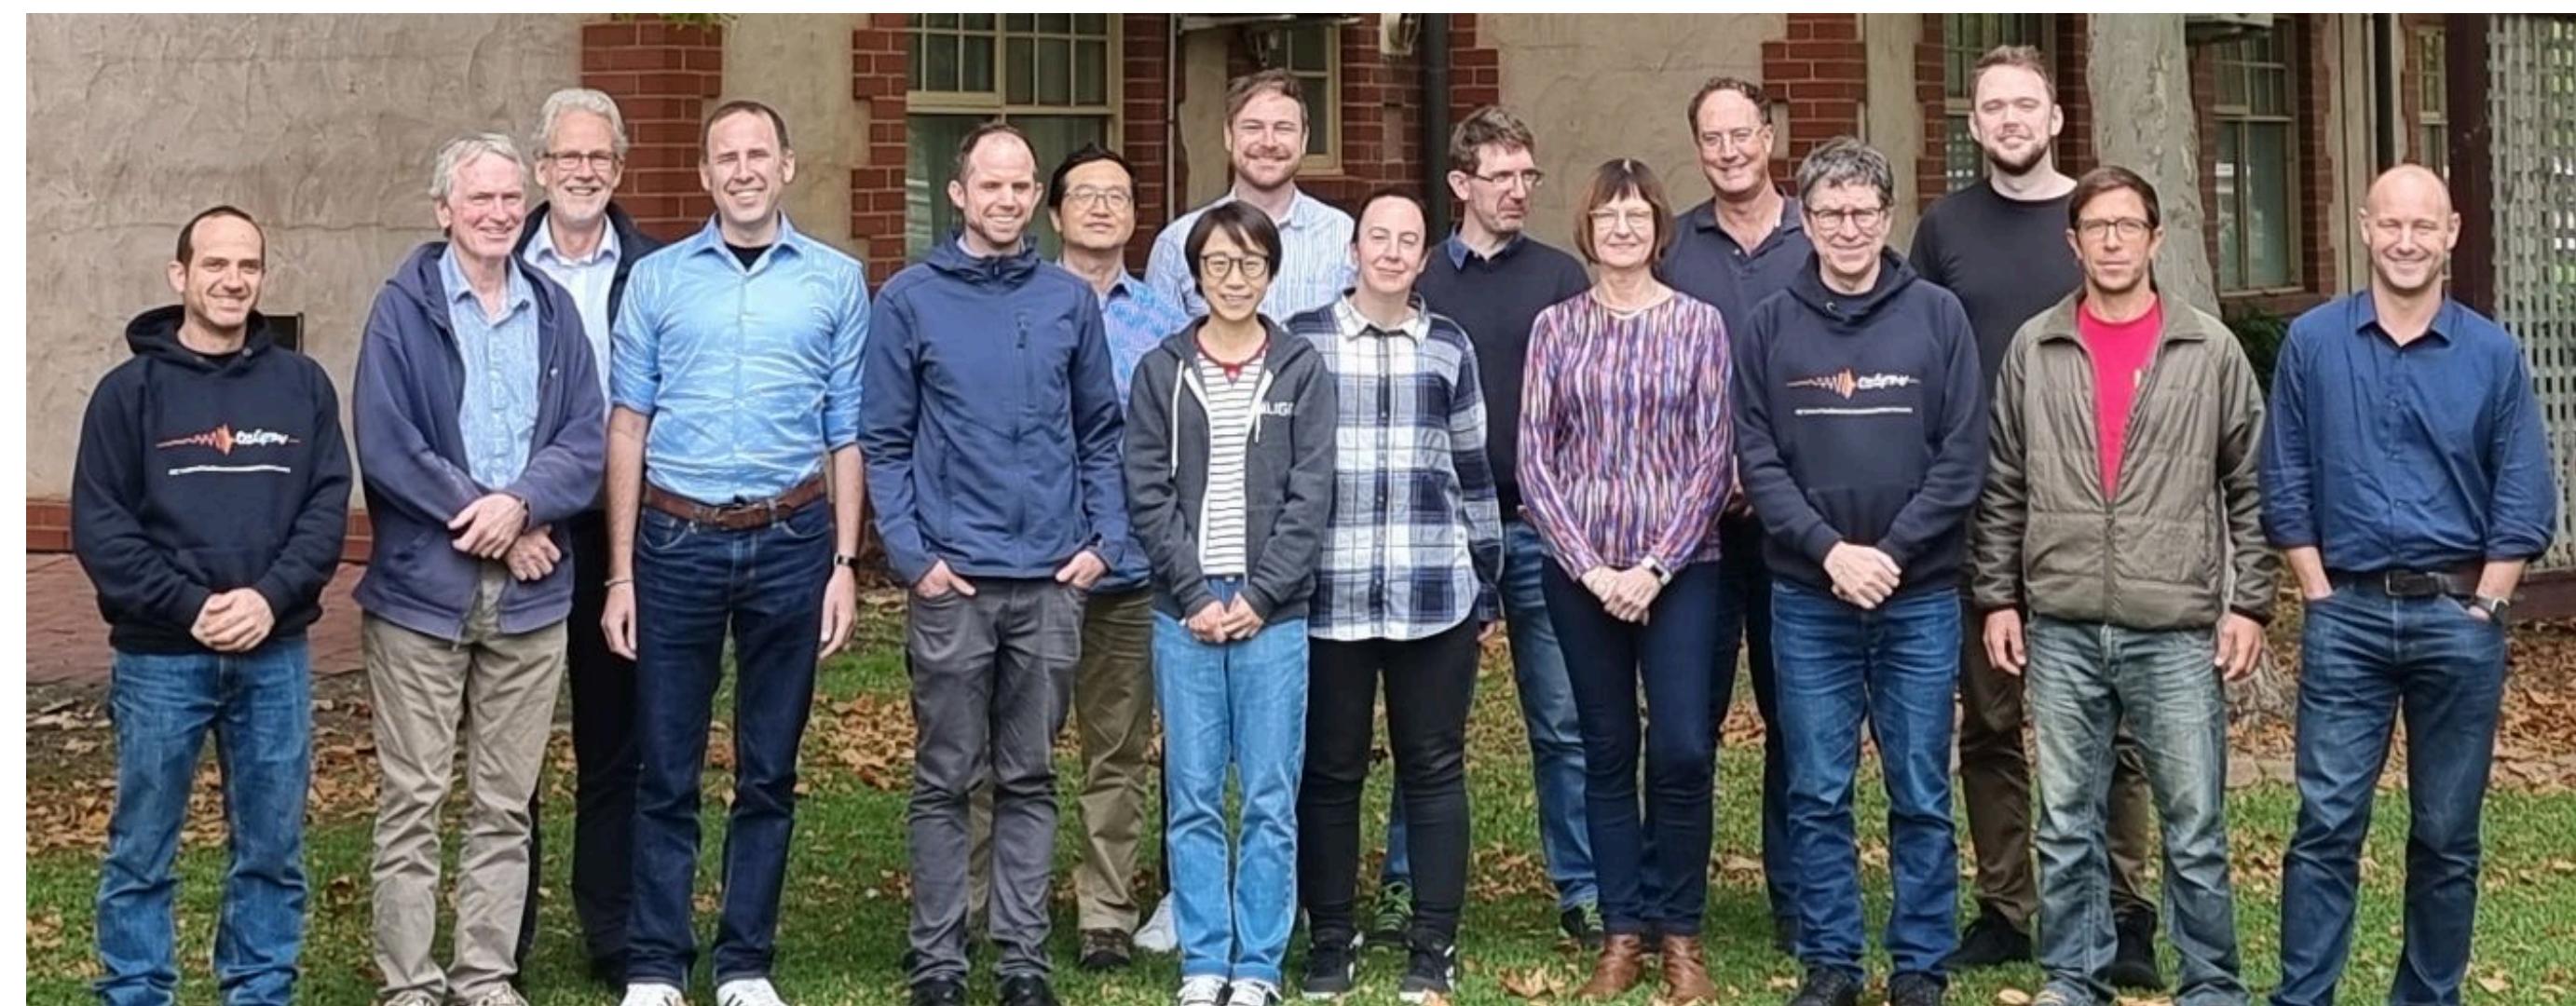

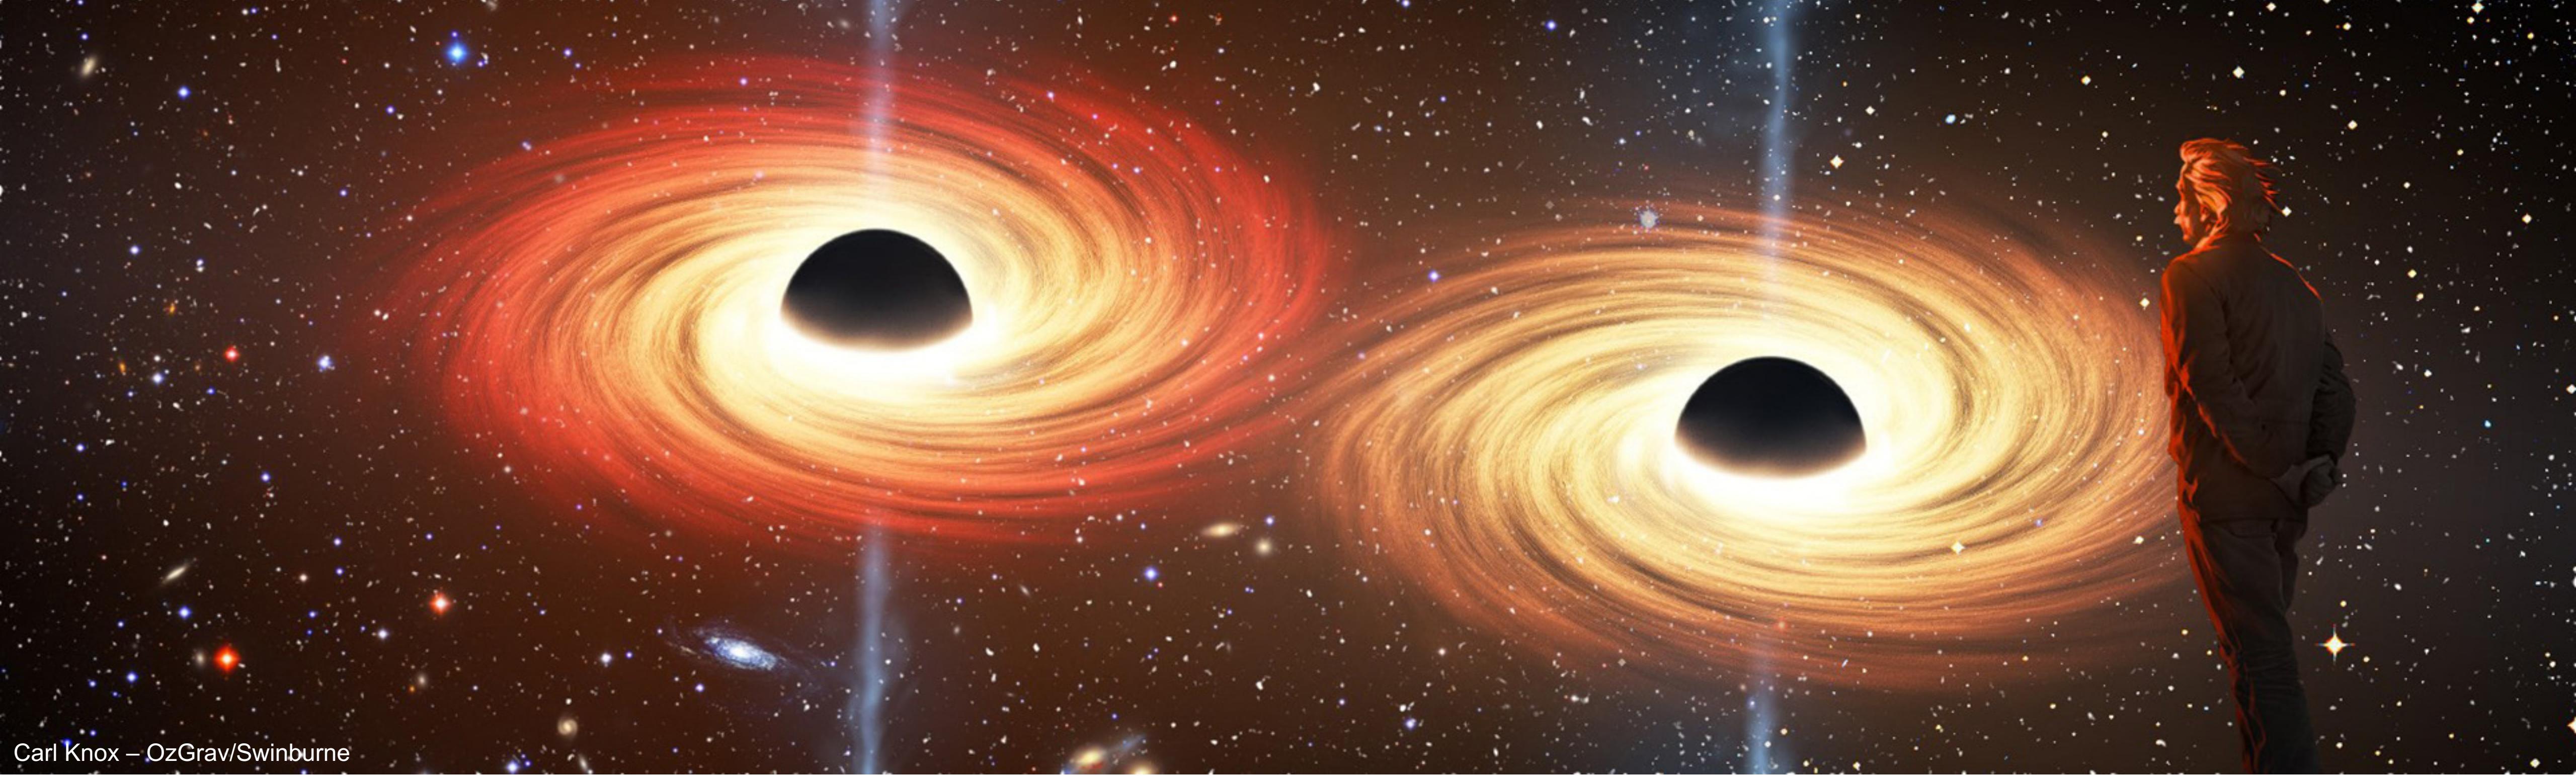

Australian Gravitational Wave Observatory Project

- Options:
 - NEMO?
 - A#-10km in Oz?
 - CE South?

What's next in gravitational-wave astronomy?

Paul Lasky

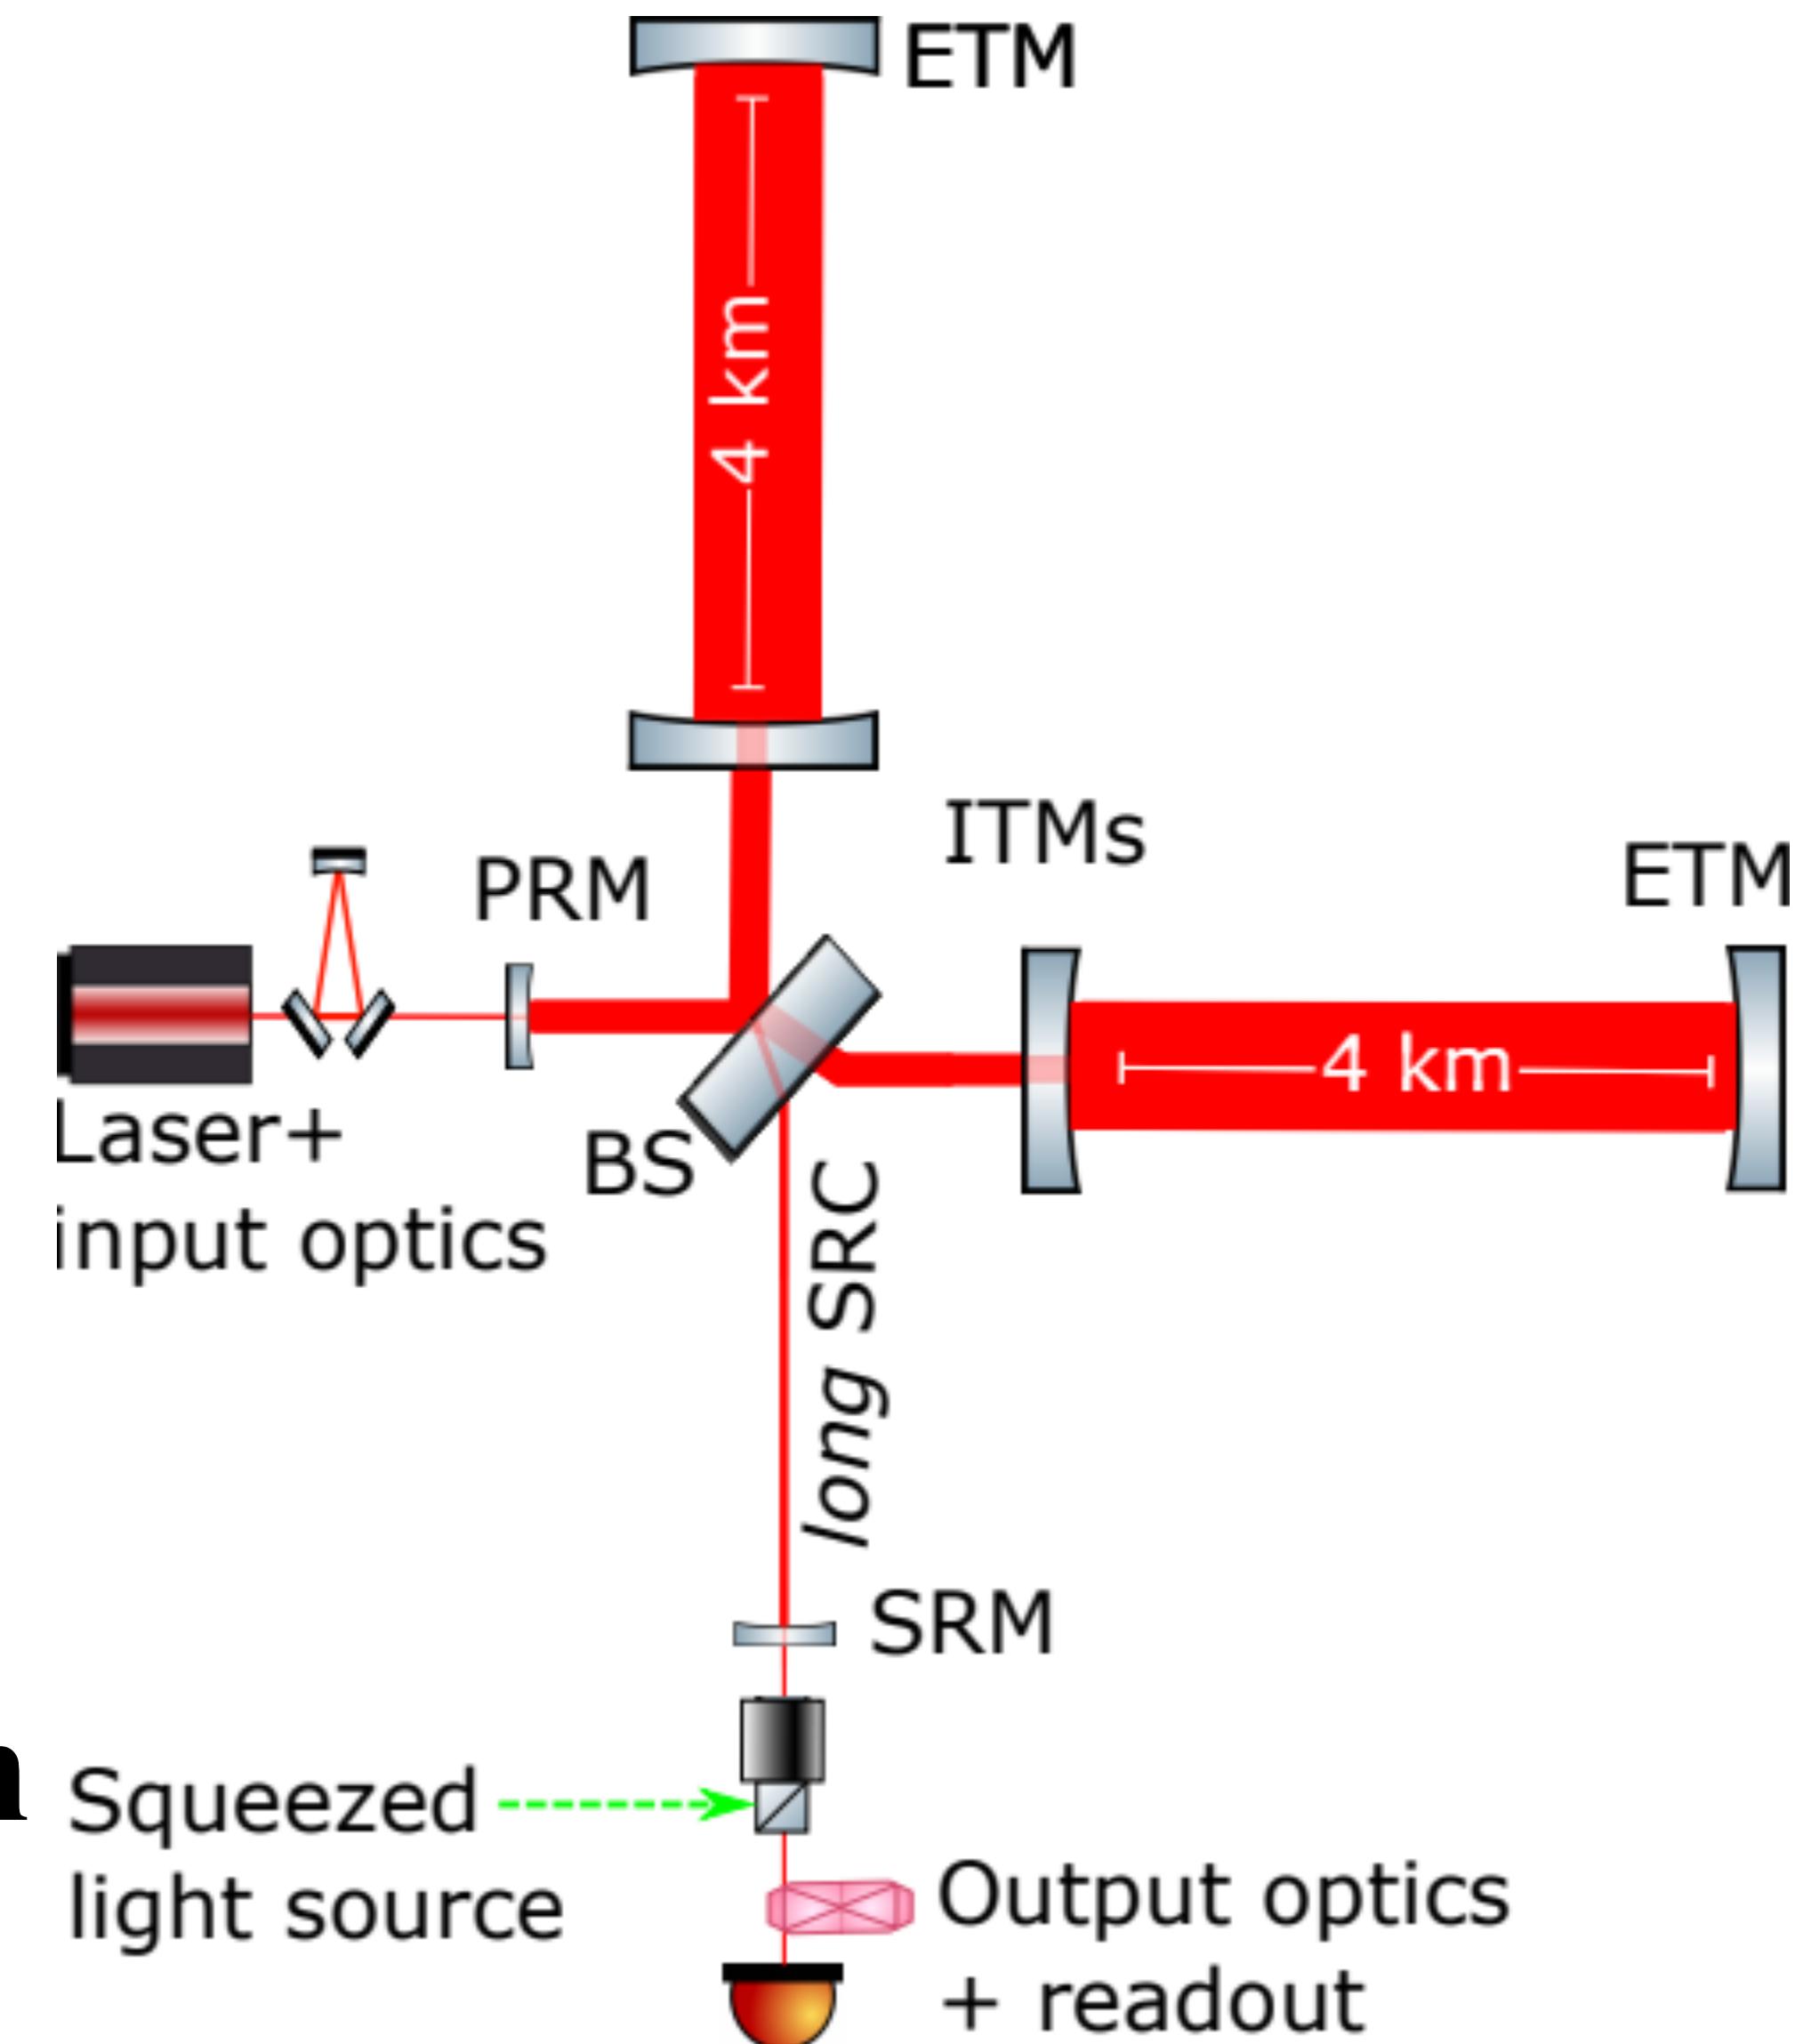

MONASH
University

NEMO: preliminary design

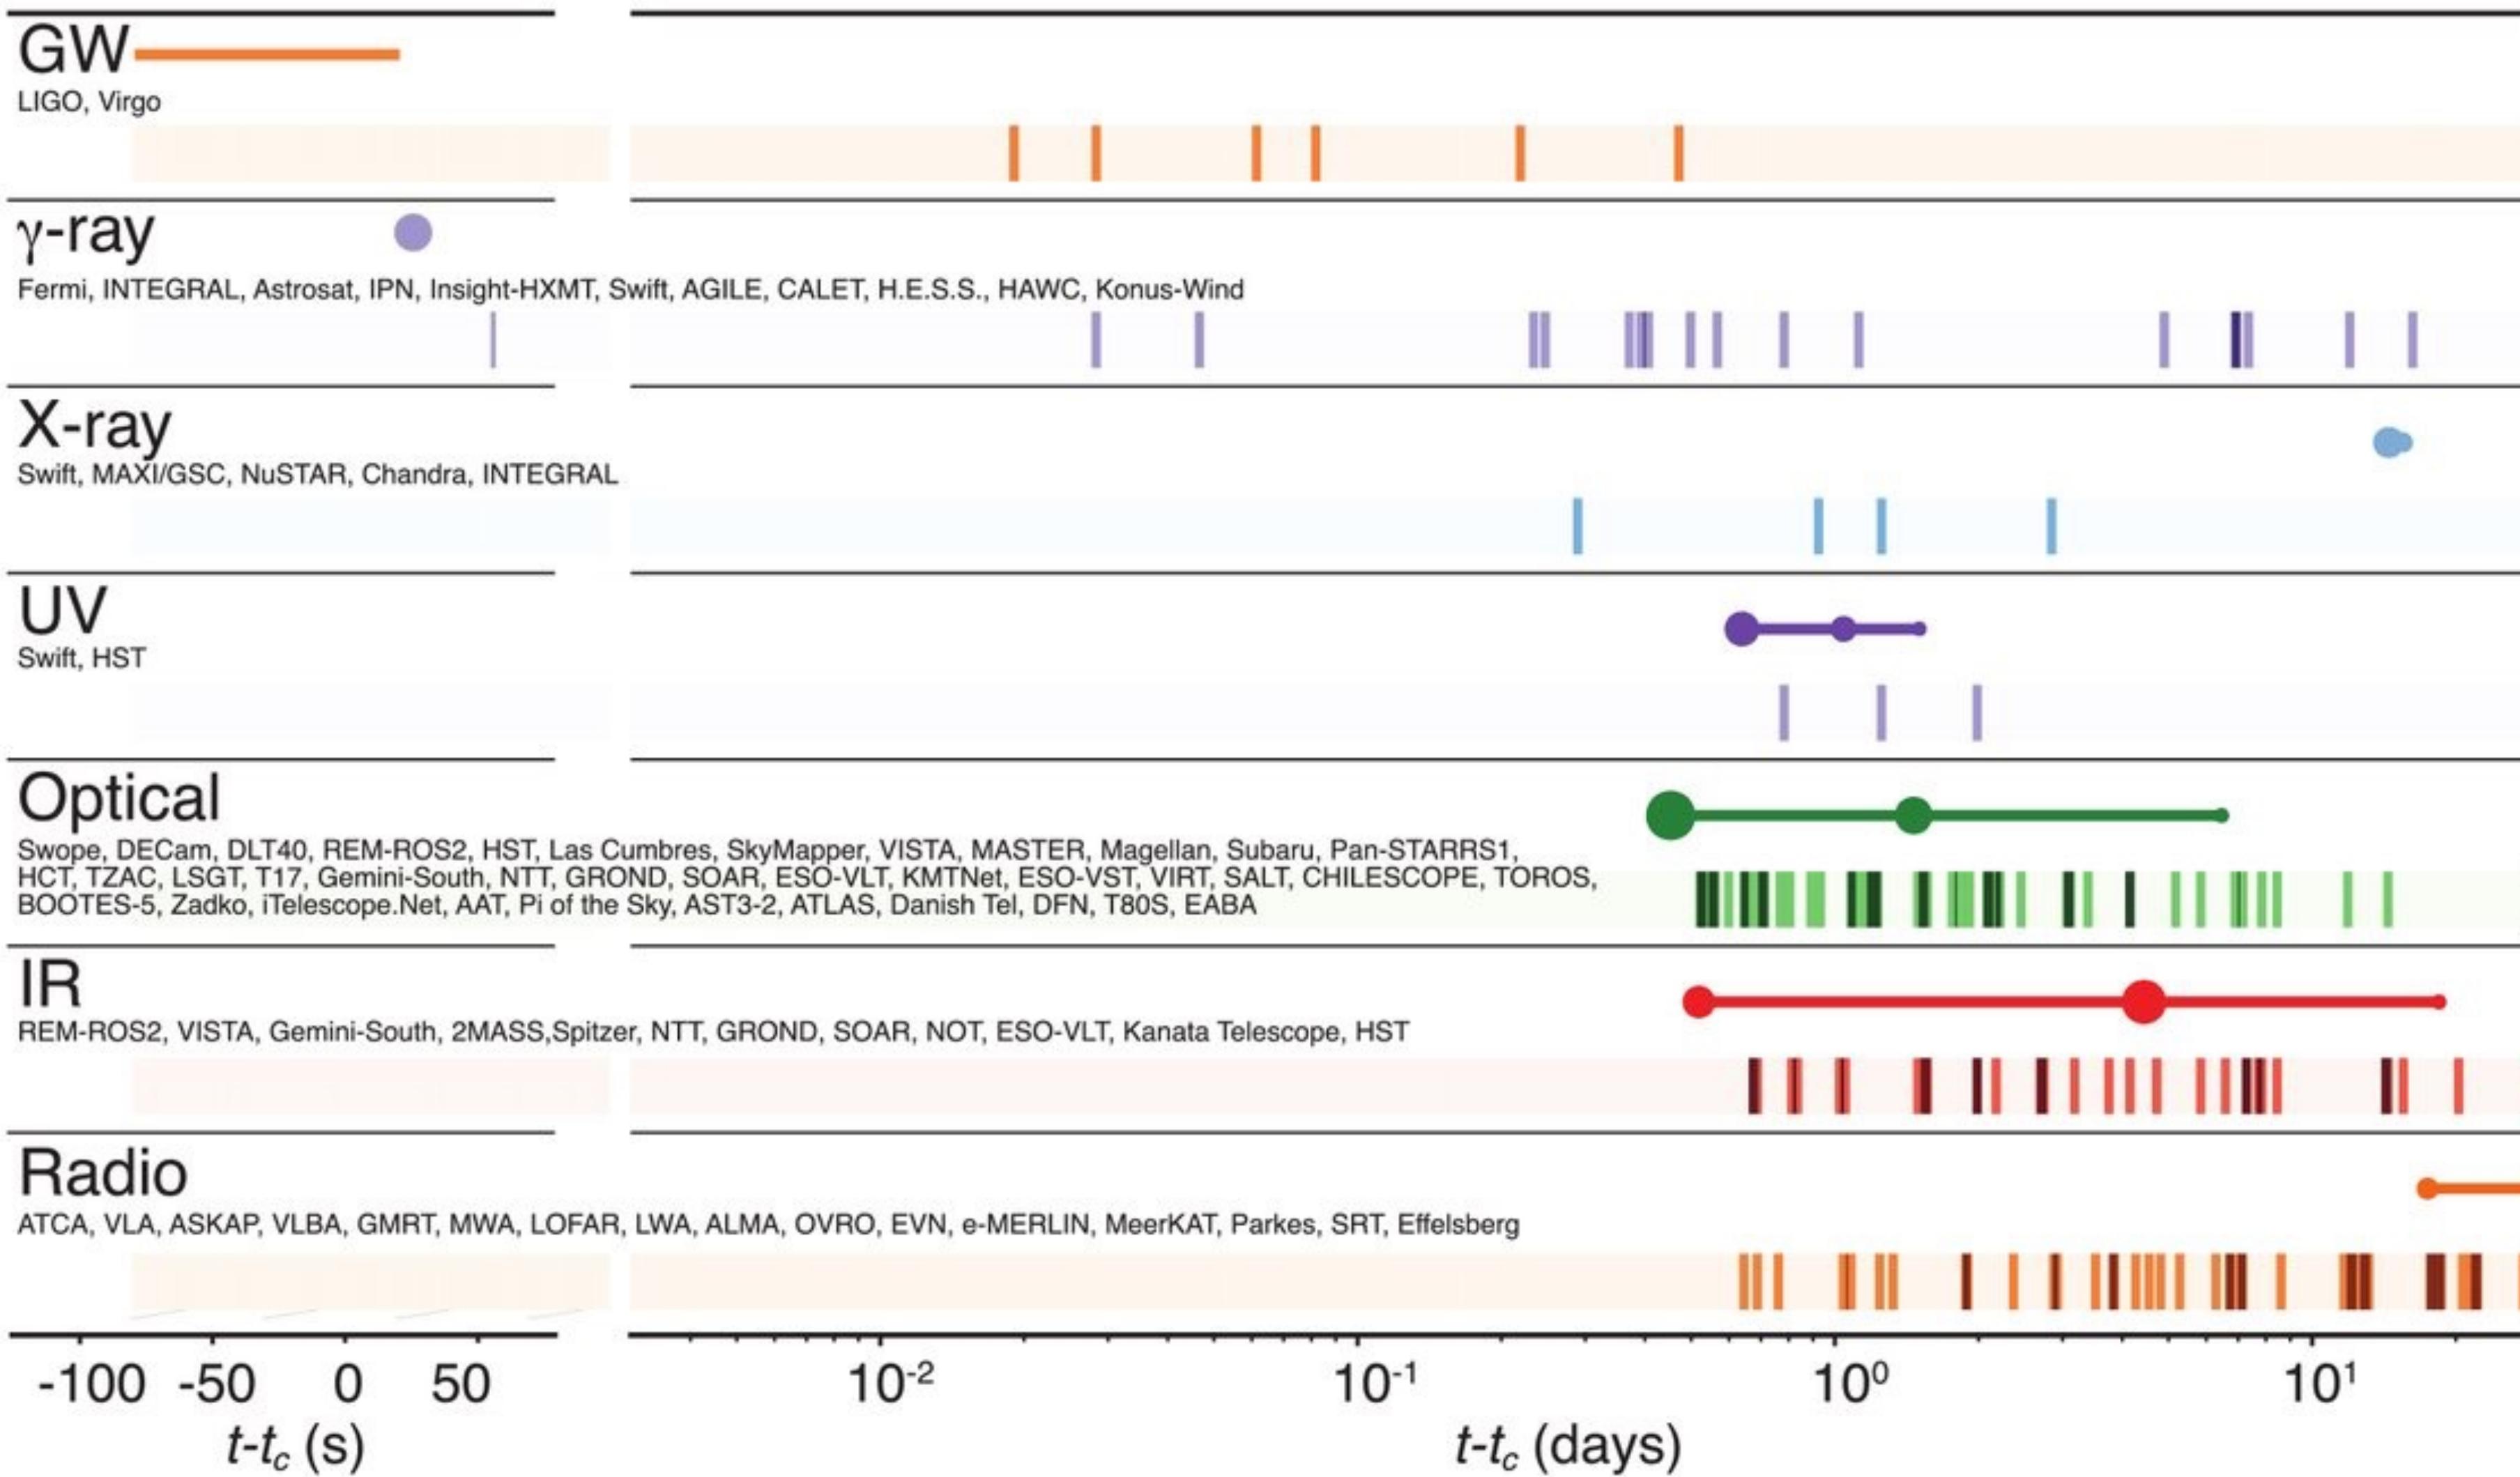

NEMO: preliminary design

- 4km arms
- 74 kg Silicon test masses
- Cooling: 123K
- 2 micron wavelength
- 500 W input power
- 4.5 MW in arms
- 7 dB Squeezing
- Suspension: steel
- **Neglect low frequency isolation**

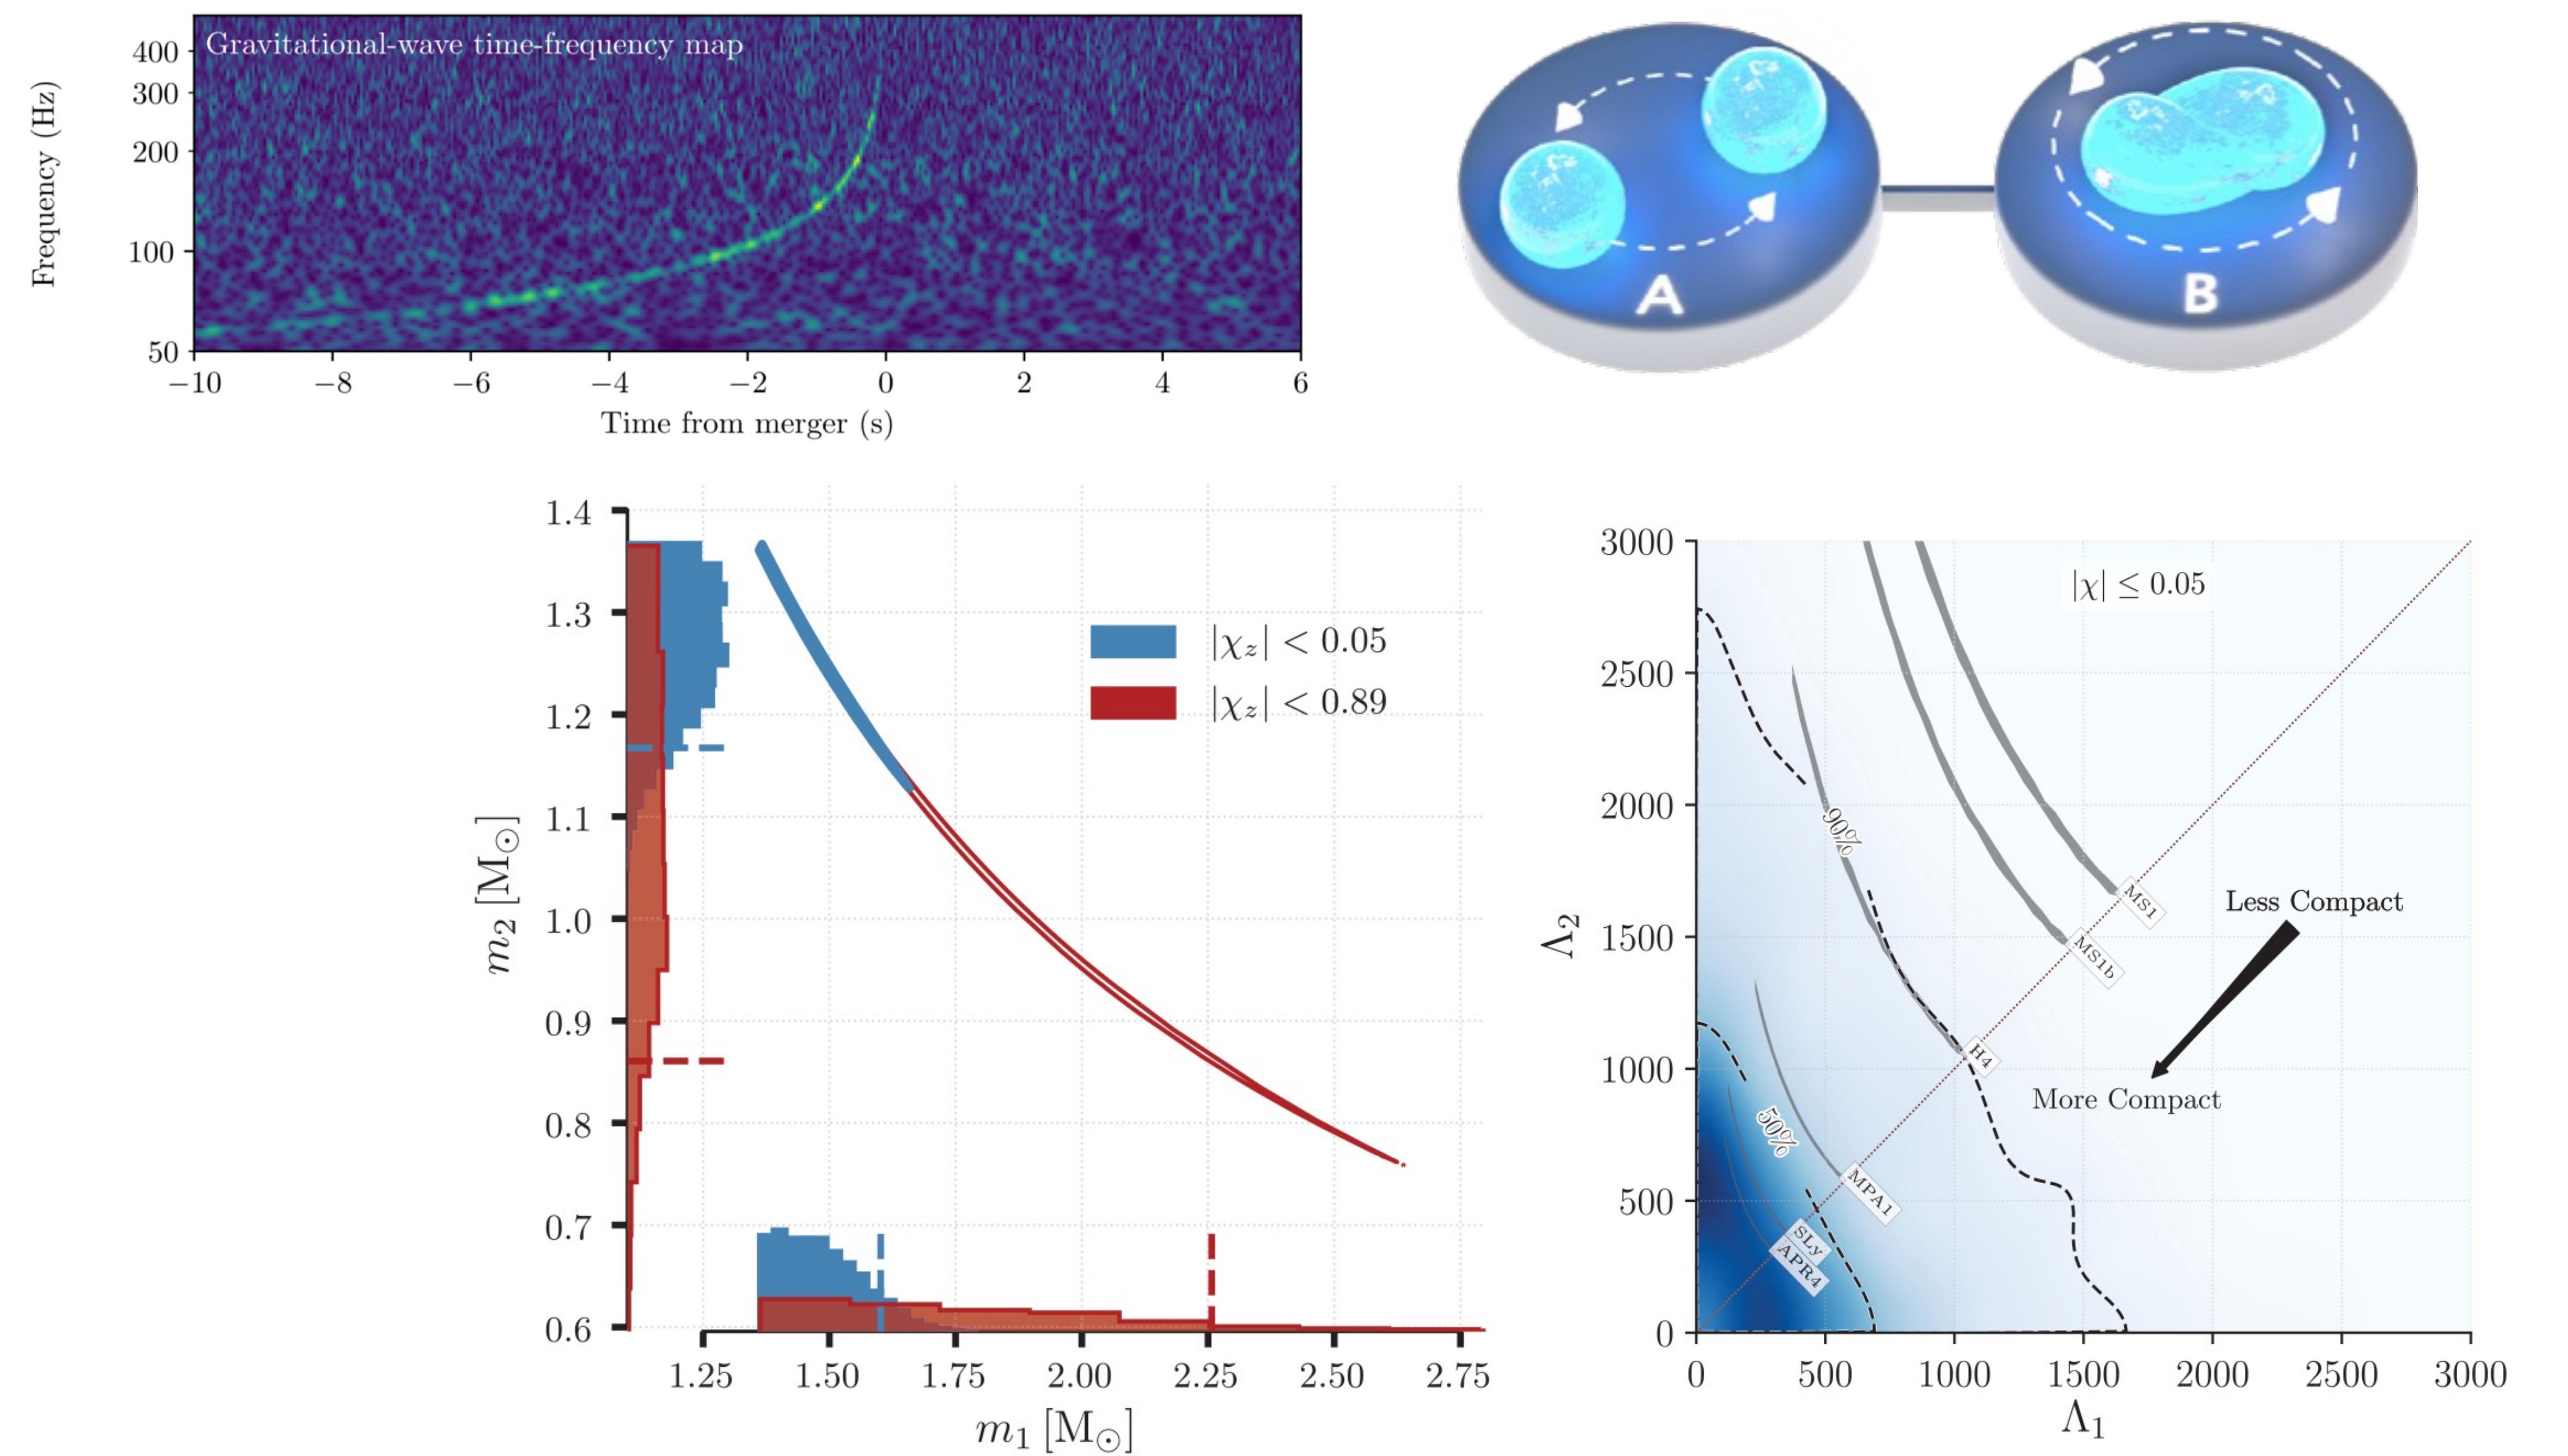

most studied astronomical event ever

Huge Australian Involvement

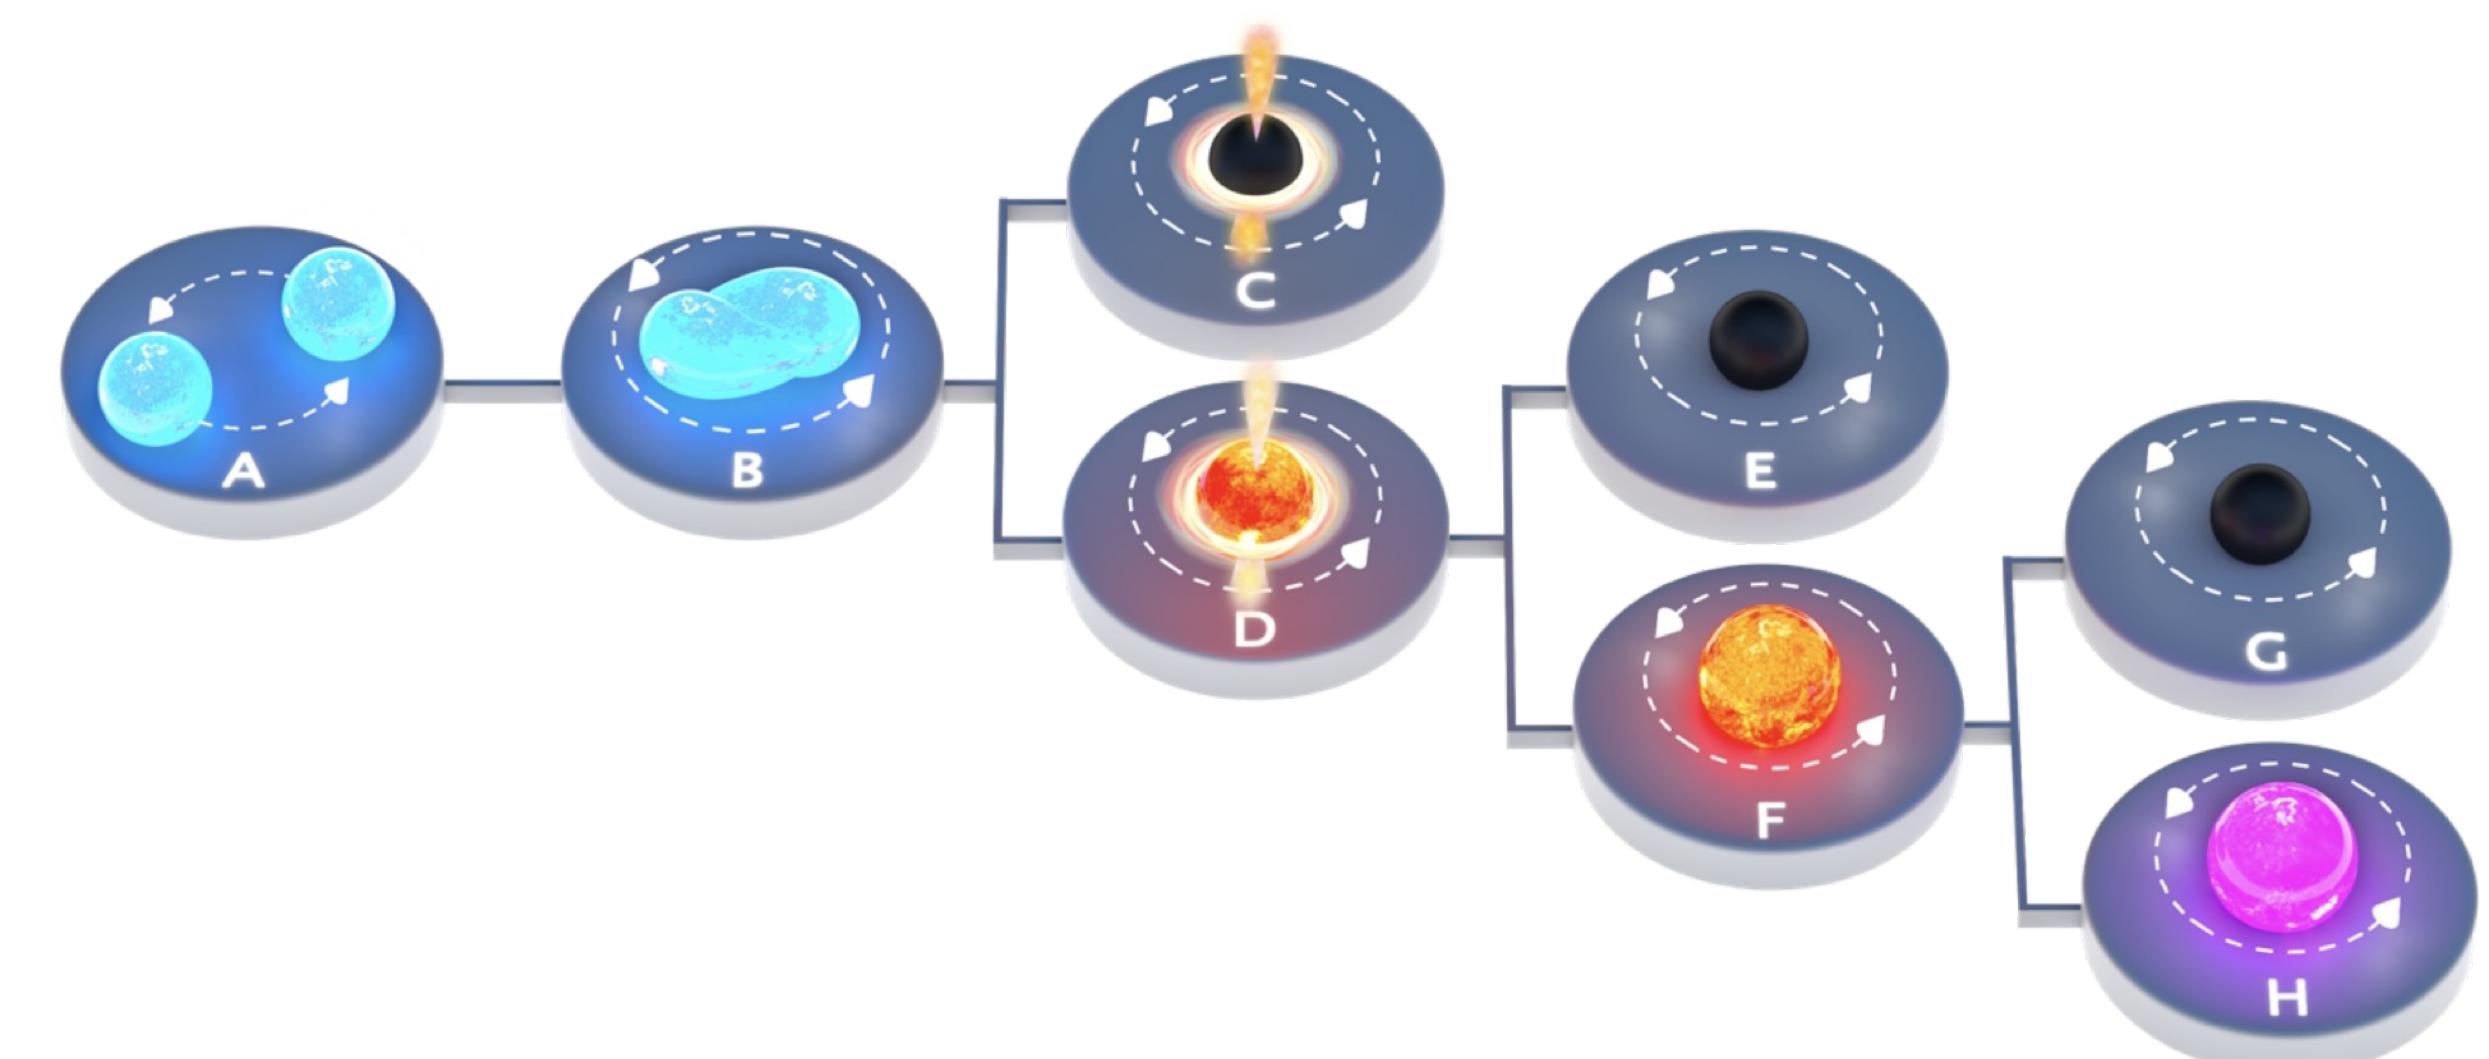

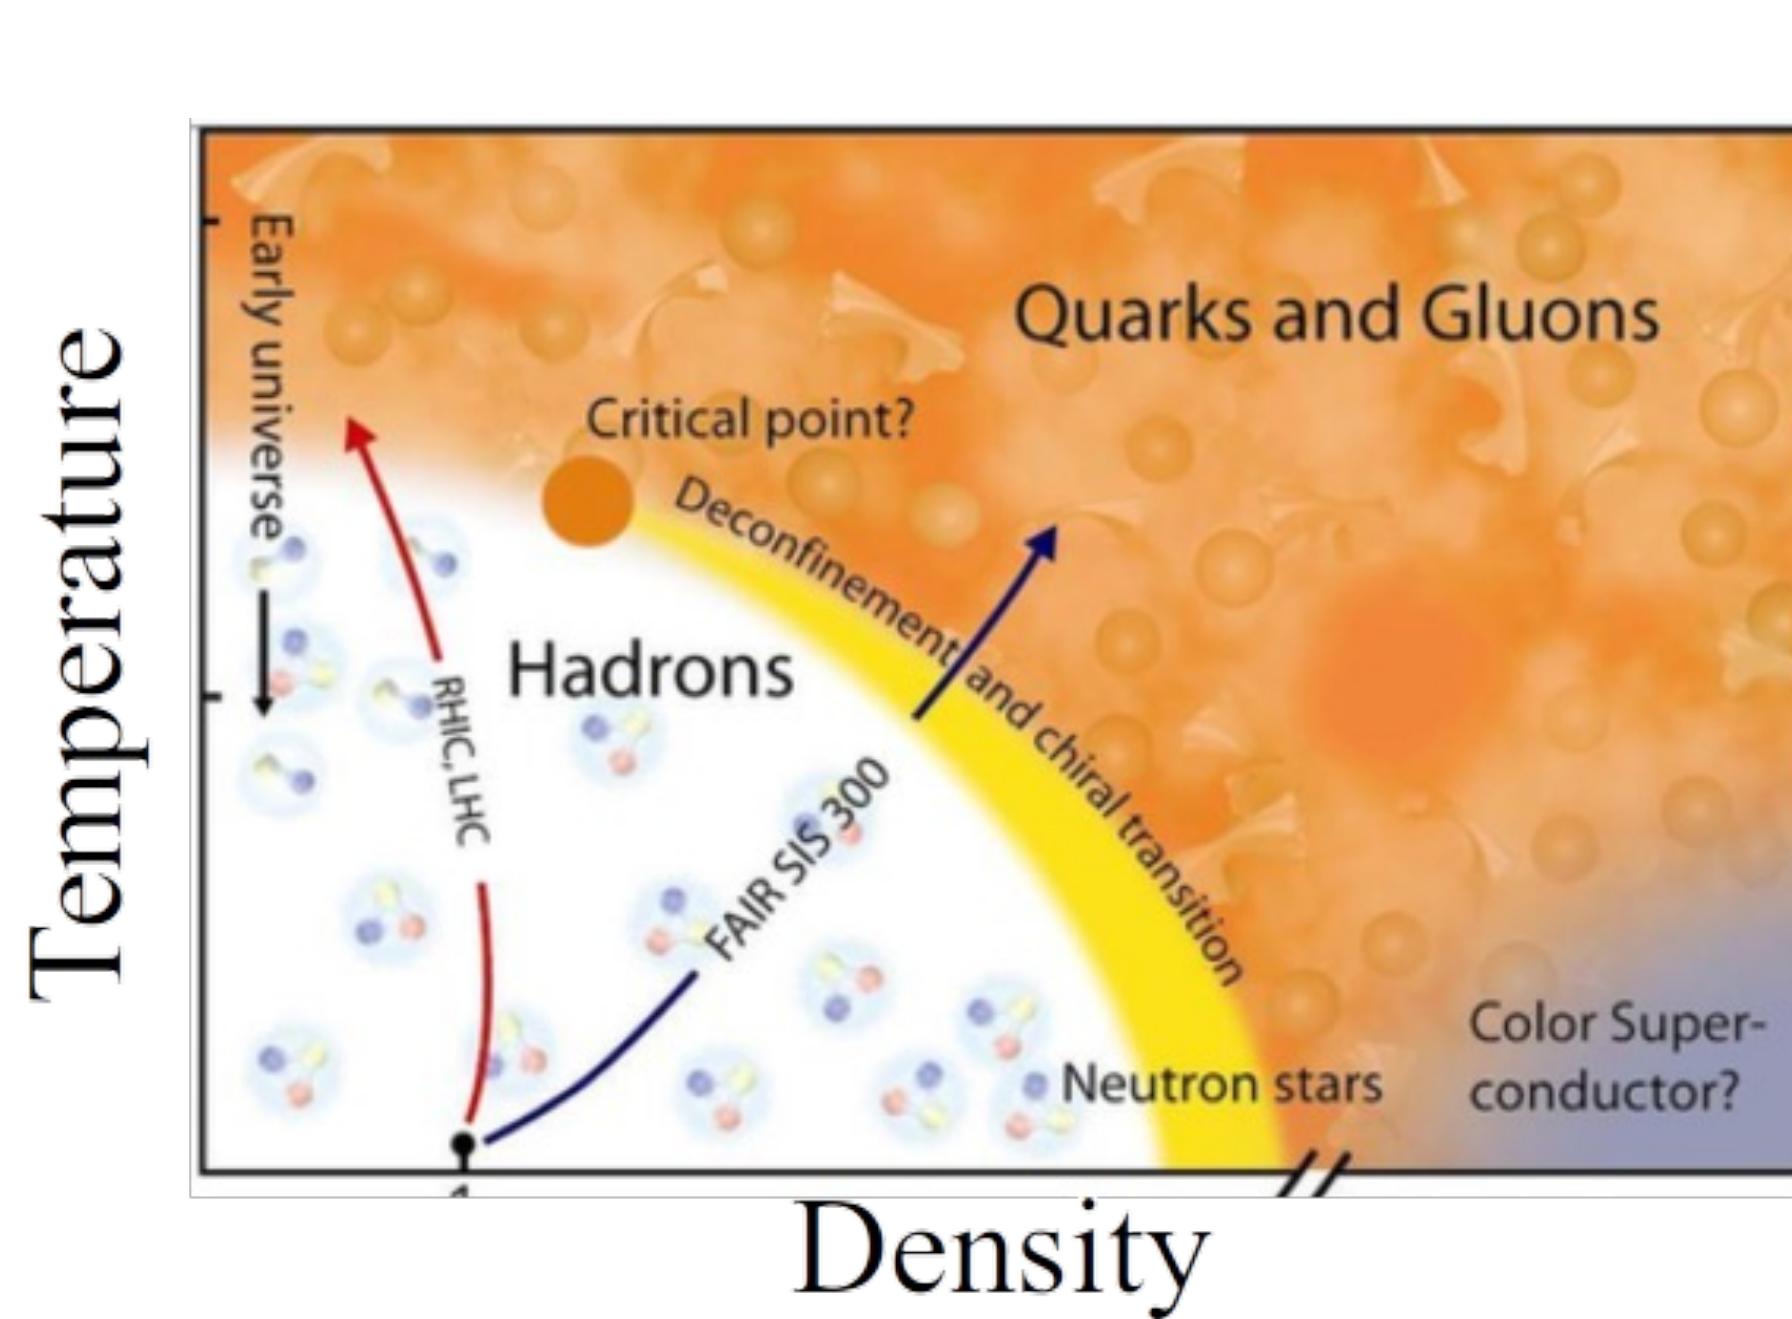

- ASKAP
- MWA
- SkyMapper
- Zadko
- Parkes
- DWF
- ATCA
- ...

Physics and Astrophysics

Neutron star mergers:

- Inspiral: cold equation of state, populations, cosmology (Davis – next!), ...
- Post-merger: hot equation of state, jets, ...
- Multimessenger: gamma-ray burst physics, neutron star astrophysics, ...

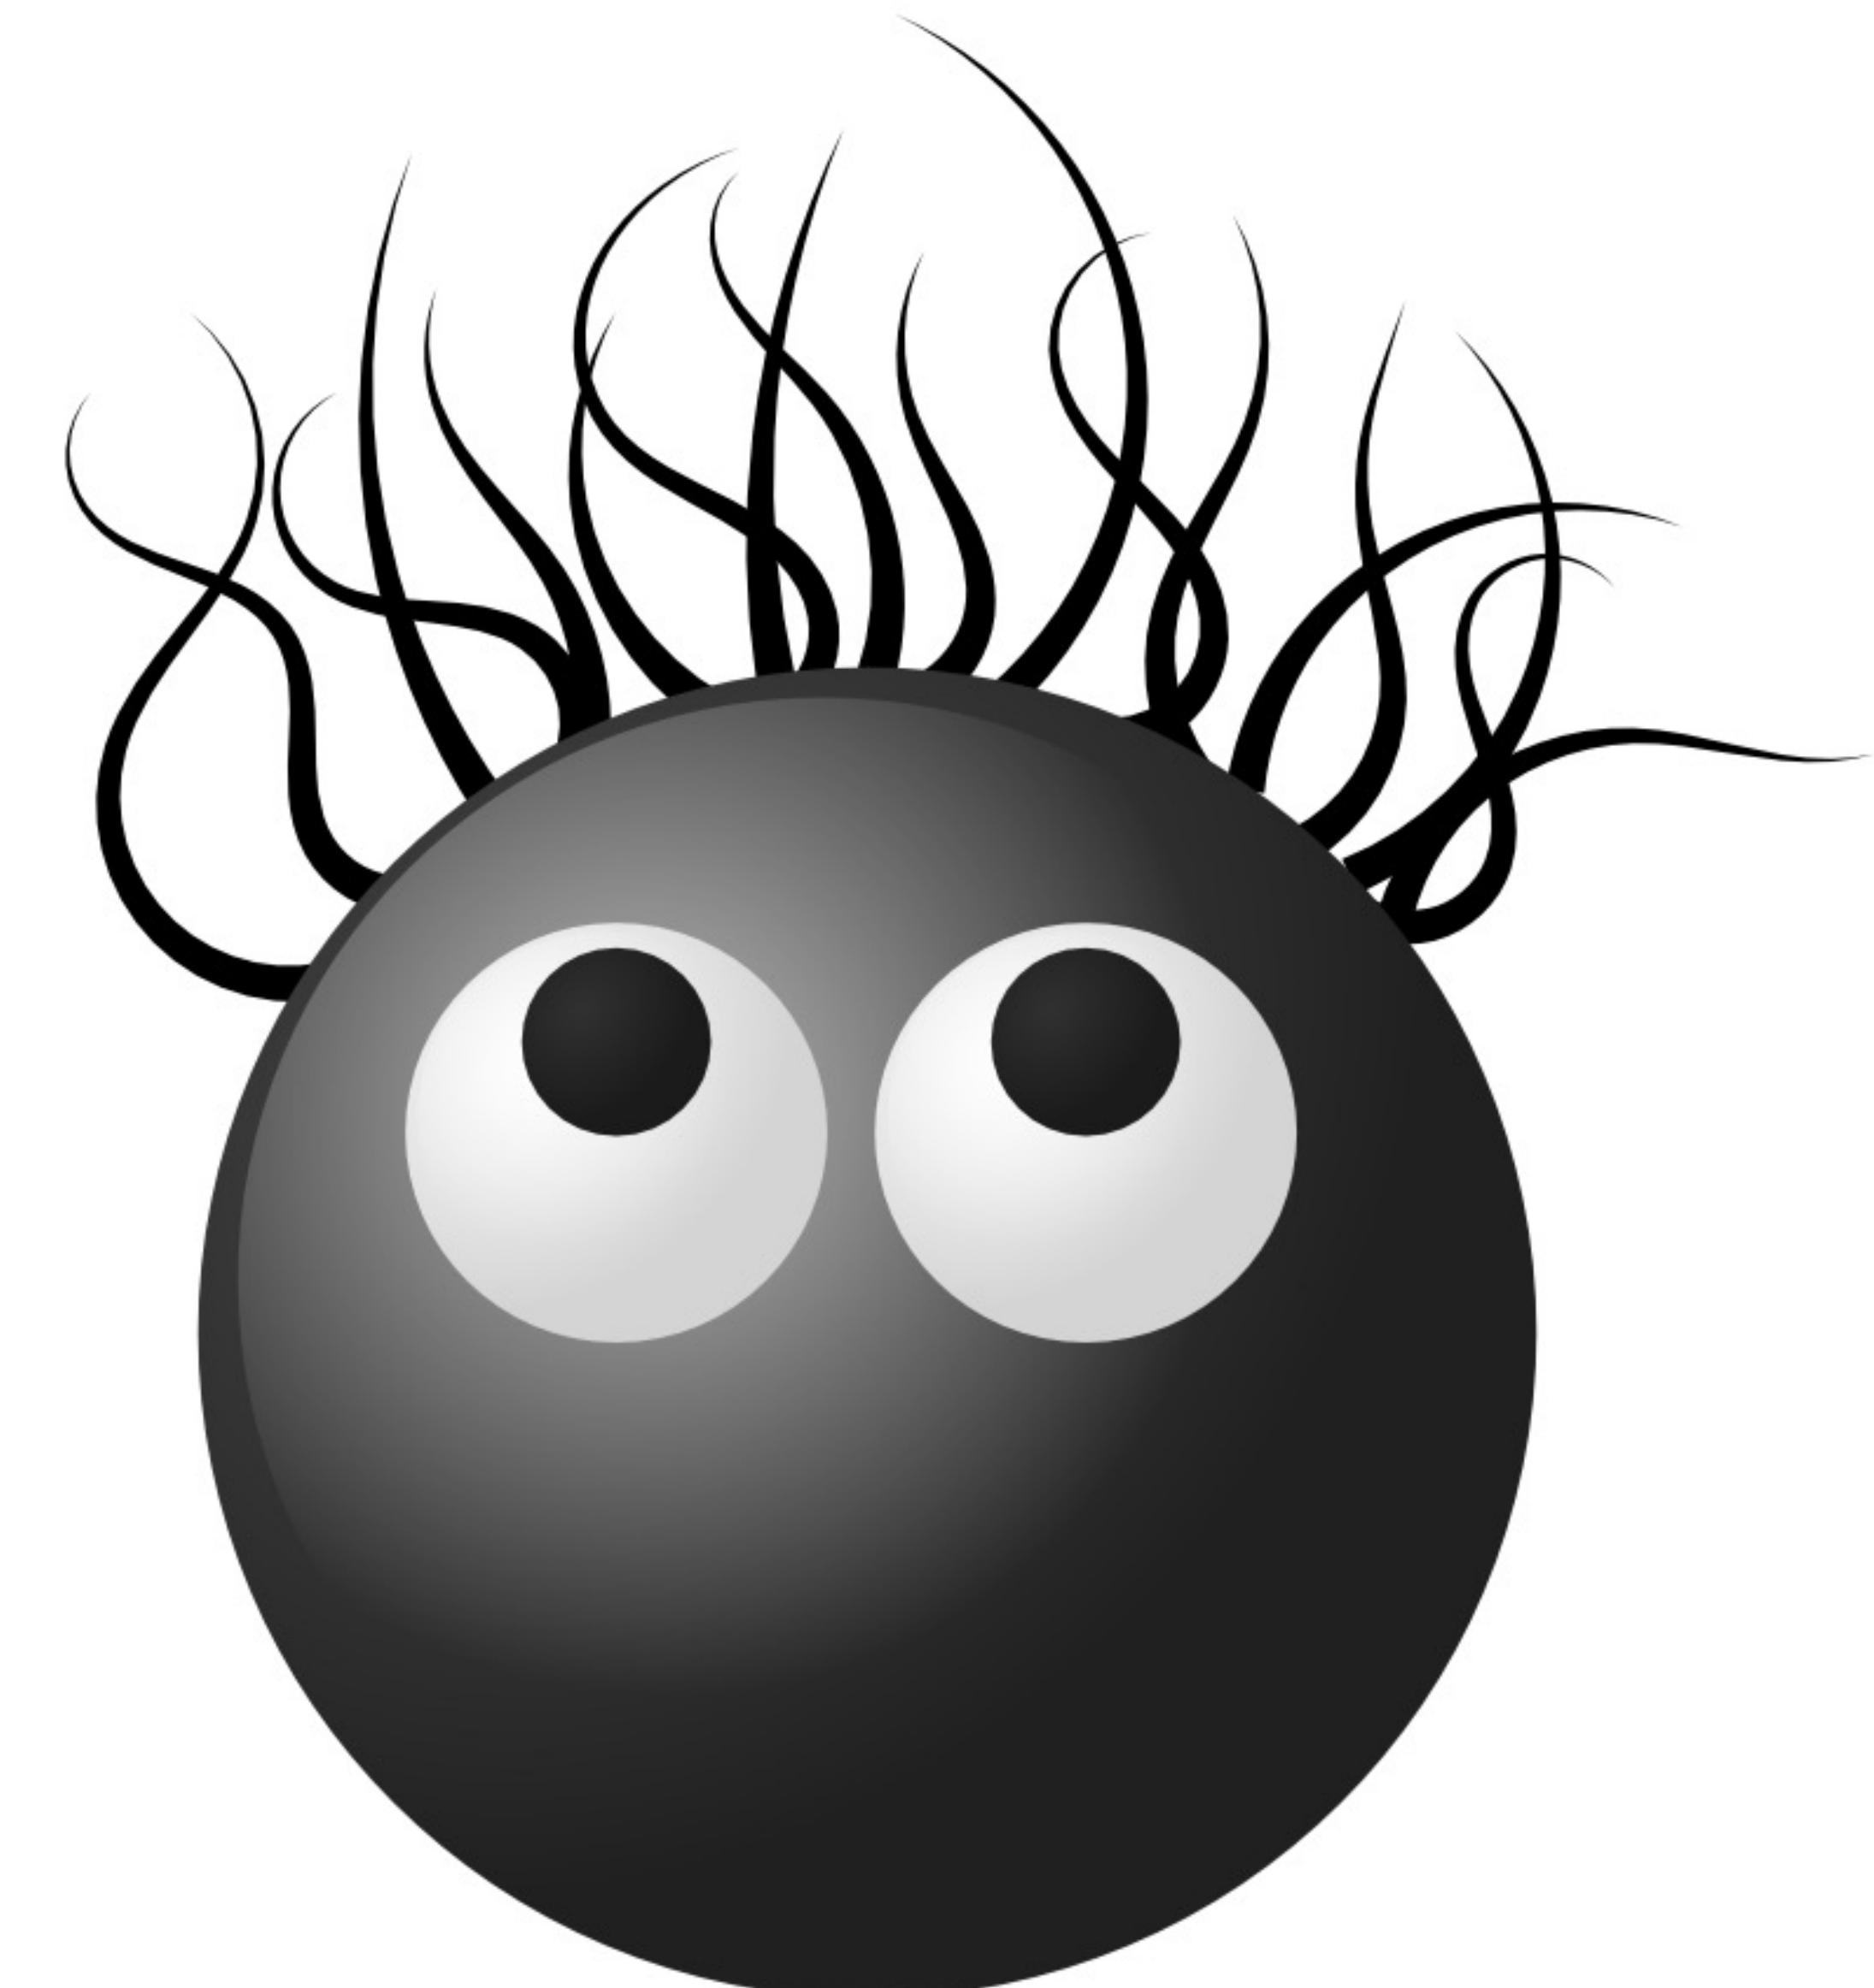

Physics and Astrophysics

Neutron star mergers

Black hole mergers

- How do black holes form and merge?
- Galactic astrophysics
- Tests of general relativity

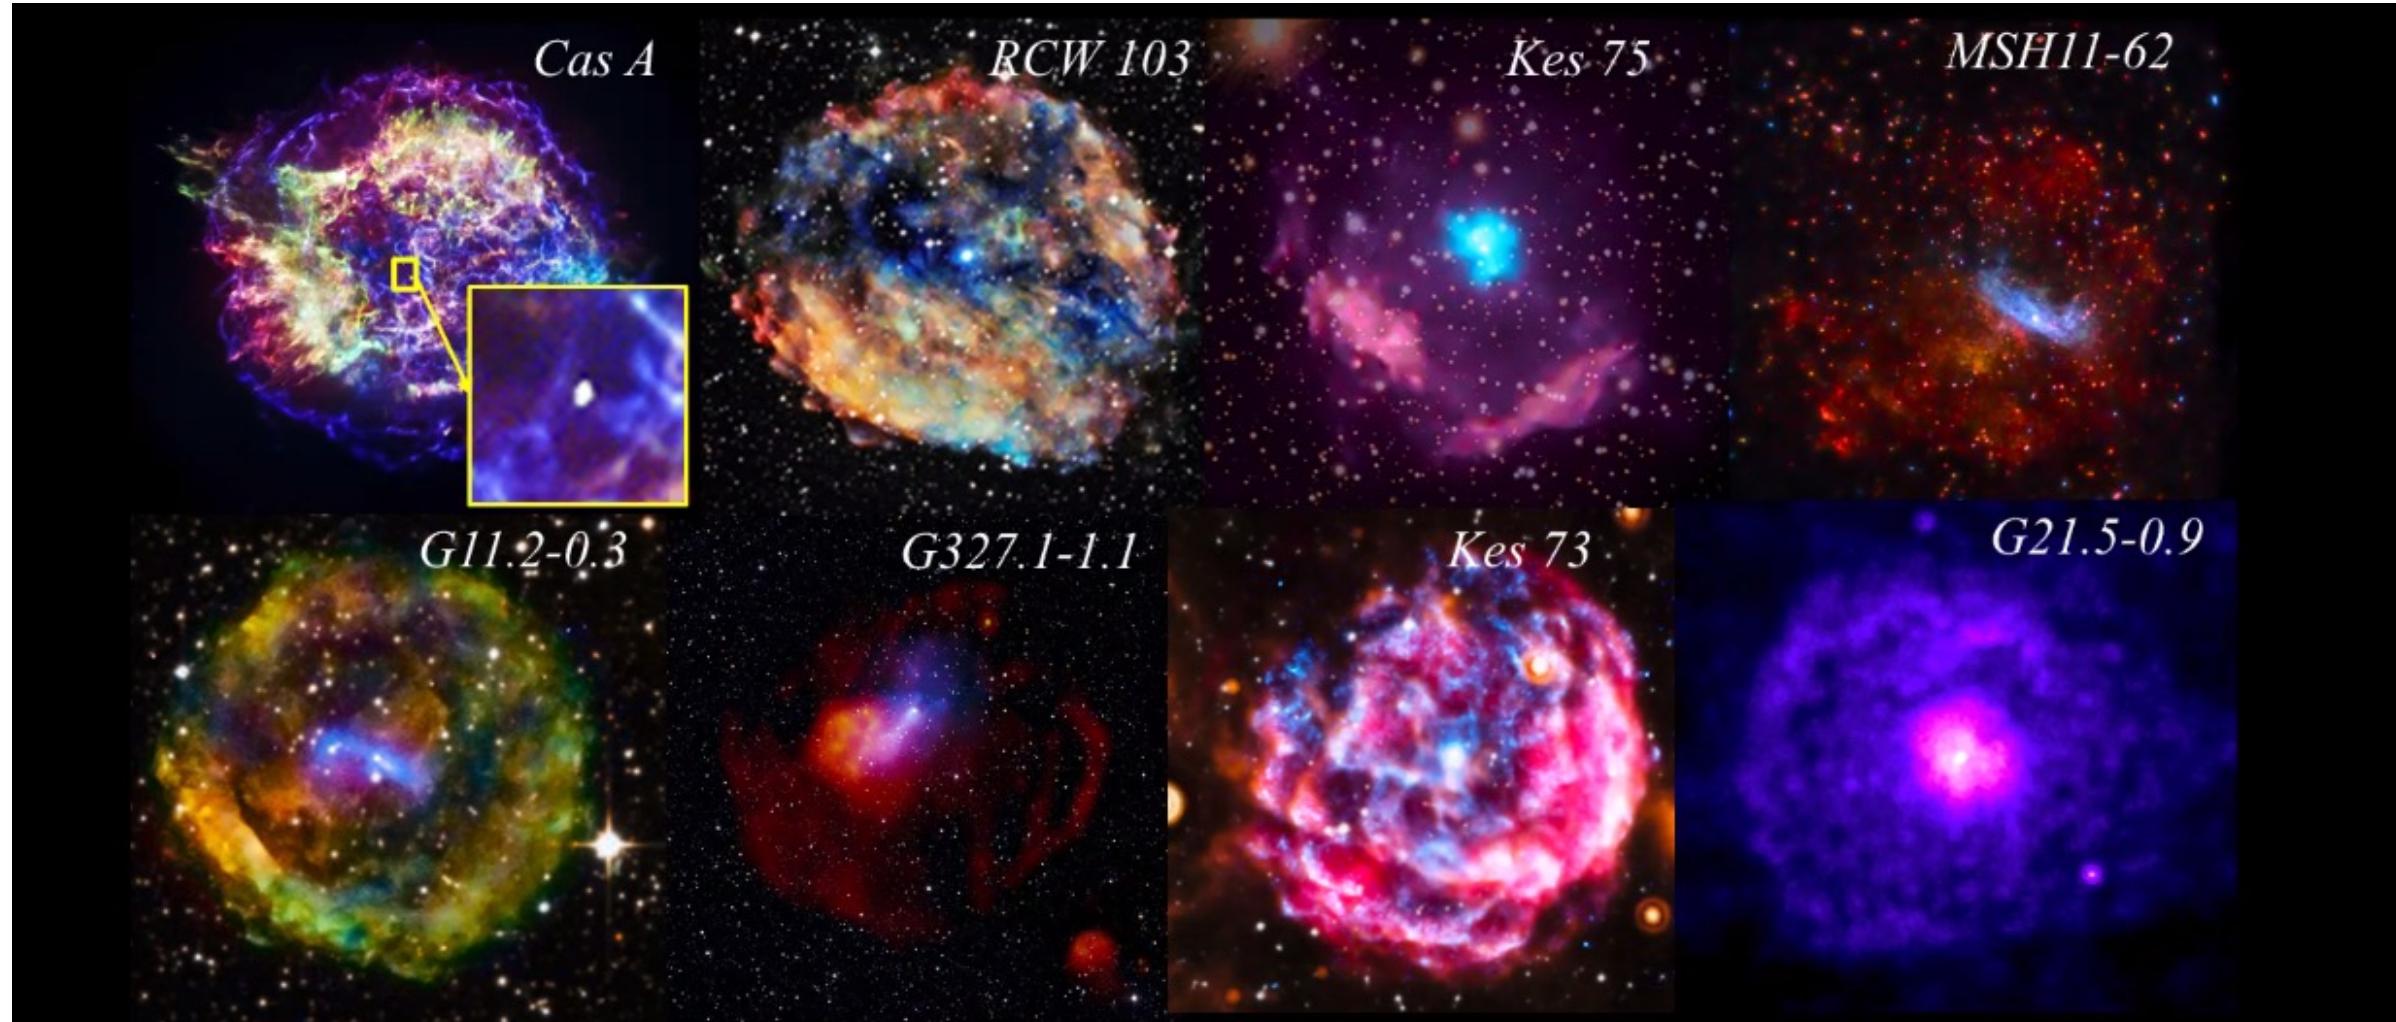

Physics and Astrophysics

Neutron star mergers

Black hole mergers

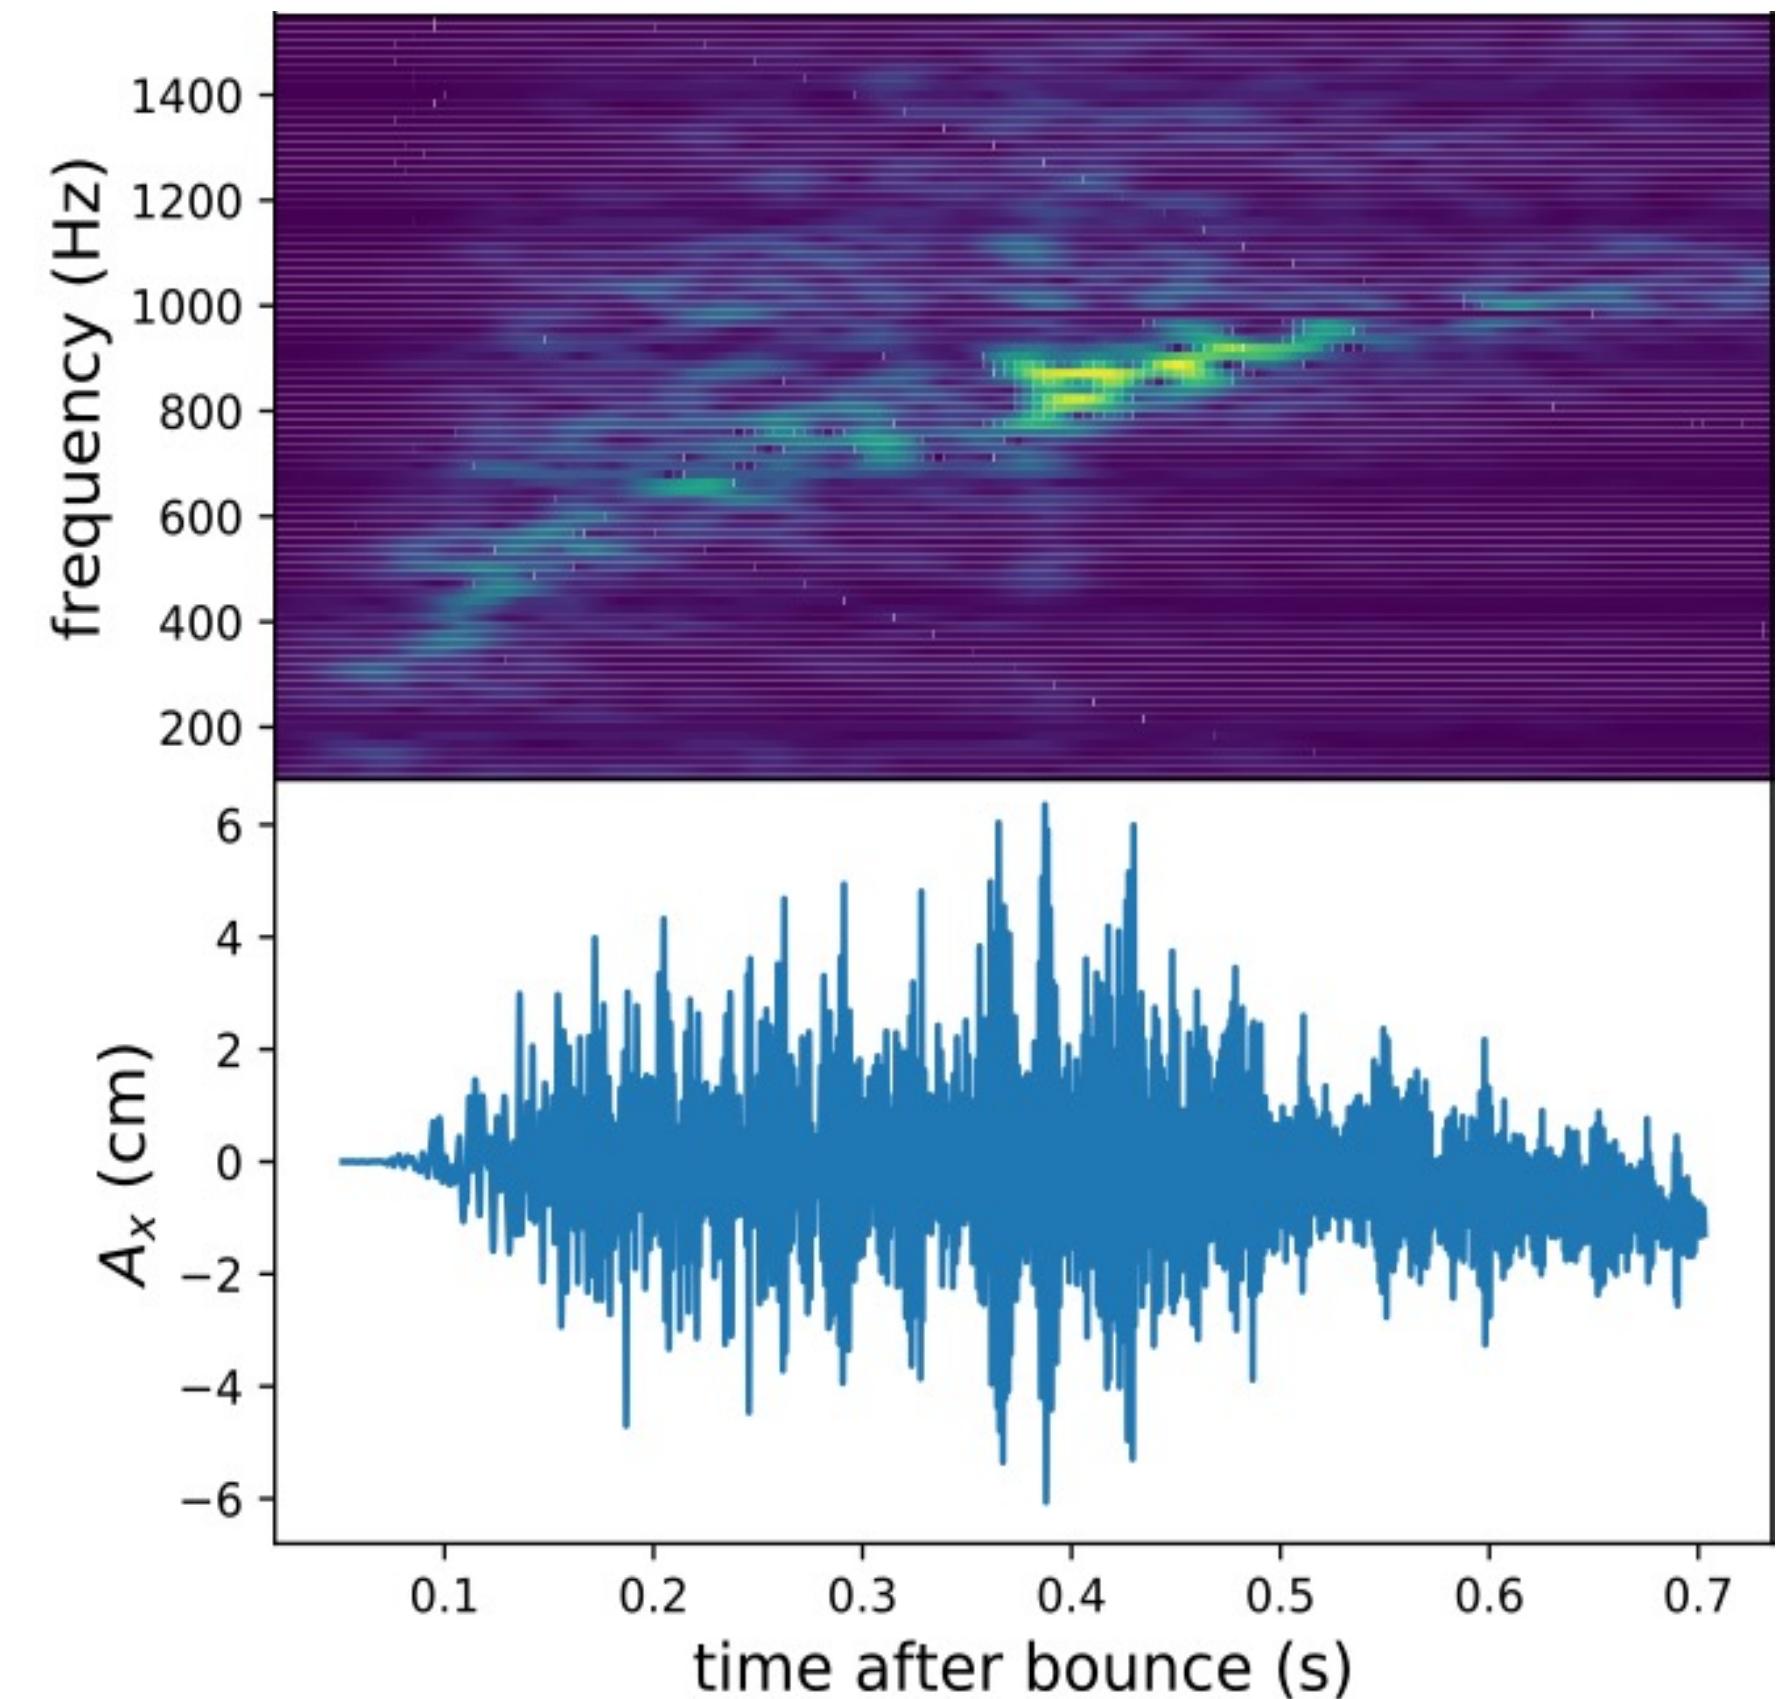

Supernovae

- Core bounce + protoneutron star oscillations
- Supernova explosion mechanism
- Multimessenger (SN remnants, pulsar kicks, ...)
